

Application Modernization Platform on Azure

cope

Grid Dynamics turned years of experience building custom microservices platforms into a generic blueprint which addresses the majority of questions arising when companies encounter the world of cloud and microservices for the first time.

The reference implementation allows companies to focus on their business domain logic and enables quick onboarding of “clean slate” implementations as well as easy migration of existing technical solutions without spending time on the infrastructure work usually associated with the beginning of a cloud journey.

Benefit

IAC Automation

Scaling capabilities out of the box

Standardization of infrastructure
Quicker time to market

How to engage

1. Complimentary Workshop

Grid Dynamics Assessment framework
GD Cloud and DevOps POV
Identify pain points and friction with existing implementation

2-4 hours

Complimentary

2. Migration Services POC

Identify microservices candidates to be migrated
Identify dependencies
Create future state architecture diagram and POC
Onboard a minimum set of microservices

2-4 weeks

USD 40,000

3. Accelerate Cloud Migration

Onboard DevOps methodology
POC to Full implementation
Onboard legacy microservices to new platform
Validate microservices
Train company’s cloud engineers and developers

16+ weeks

USD 250,000+
