

Cloud Native Advance Vision Workshop

Kainos has a 36+ year history helping organisations of all sizes – including some the largest UK government departments - adopt technology and **drive transformation on their terms**. We are Azure platform specialists holding many competencies, hundreds of certifications and multiple advanced specialisations including in Kubernetes, Windows, SQL Server, Linux and Opensource technologies.

What do you get?

Recognised globally by Microsoft for our Cloud Native Leadership, our Advance Vision workshop helps customers modernise through Microsoft Cloud Native technologies.

Aligned to your business drivers, challenges, and desired future state, whether you wish to encourage more innovation, deliver cost savings, improve service reliability, embed data-driven decisioning, improve developer productivity, reduce environmental impact, or embed a product-centric approach – **our Advance Workshop will help you create a high-level transformation plan and recommendations for next steps**. We will deliver:

- **High Level plan:** A impartial view of how to achieve your future vision including key tasks and costs.
- **Expert advice:** With 200+ specialist Microsoft certifications, we have won 40+ national cloud awards
- **Industry alignment:** Baked in alignment to Microsoft's Cloud Adoption and Well Architected frameworks.
- **Rapid understanding:** Quickly figure out which areas of your business need to adopt changes and how that can be achieved.
- **Thinking beyond technology:** We always work towards achieving your business needs rather than just meeting the technology requirements.

How does this work?

1-Day Discovery workshop

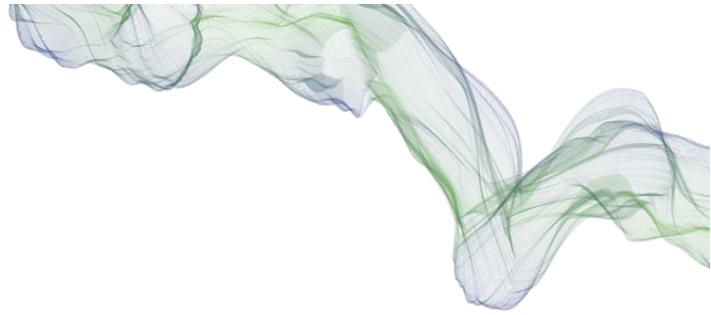

- Learn more about your business, its challenges, and any market pressures/opportunities
- Discuss your current-state, future vision, and any in-flight transformation/modernisation initiatives
- Discuss your current capabilities, processes, technologies and ways-of-working in support of the above
- Ensuring maximum value can be derived from the workshop, in advance we'll circulate an agenda and requests for any relevant documentation.

Analysis

- We will thoroughly analyse the workshop findings to produce high-level plan for how we would recommend delivering your future vision
- Our analysis will encompass people, process, and technology – not just the latter.

Plan Playback

We'll schedule a session to walkthrough our recommendations including:

- Key activities, business prioritisation, modernisation sequencing, enablement needs, major risks and potential mitigations, security & compliance factors, and potential costs
- Opportunities to accelerate progress and provide rapid outcomes
