EDI Modernization
Take EDI to the Azure Cloud – In One Week

Trading partner enablement (TPE) and Electronic Data Interface (EDI) (X12 or DIFAC) are an integral part of your business, But your EDI platform is getting up in there in years. Partner onboarding takes forever and nobody knows how that EDI black box works. At the moment your EDI is delivering nothing but high costs, complexity and evokes a deep fear in....everybody.

Azure EDI by TwoConnect

Two Connect can design, develop, and deploy a modern, cloud based EDI integration solution that significantly reduces costs and increases efficiencies, catapulting your EDI into the 21st century.

EDI itself has not changed in a long time but the way you implement your EDI integration solutions sure has. You can do everything faster and better with EDI in the Azure cloud.

Why Azure EDI by TwoConnect

- Eliminate all EDI infrastructure costs
- Accelerate TPE partner onboarding from weeks or months to days or hours
- Incorporate modern automation and intelligence into your EDI partner workflows
- Discover your EDI data like you never have before and use it

Save Time
- A full EDI transaction up and running in one week
- Partner onboarding times reduced by more than 80%
- Expose EDI capabilities to partners through cloud APIs
- Solutions that run on premise, in the cloud, or a hybrid

Save Money
- No need to upgrade the cloud.
- Zero cost for infrastructure.
- All Azure cloud features instantaneously available to your EDI solution
- Modern EDI is not an oxymoron

Modern EDI
- Add machine learning and AI to your EDI workflows
- Employ modern Devops for your EDI solutions
- Reduce cost significantly using oay as you go EDI
- Instant disaster recovery environment

> "Two Connect has been instrumental in helping the University of Miami Information Technology (UMIT) department complete the conversion from a legacy EDI system to the new integration environment. Their customer service and technical support is top notch, and their consultants are professional and knowledgeable. We look forward to our continued relationship with TwoConnect."

UNIVERSITY OF MIAMI

Steps to EDI Modernization

1

EDI Environment Discovery

- Carefully analyze your current EDI Environment
- Identify an initial EDI Transaction to onboard to Azure
- Gather solution requirements from reviewing existing EDI thus eliminating impact on company resources.

2

EDI Solution Development

- Build all the solution workflow, user stories list all development tasks
- Develop the EDI solution on Azure along with automated deployment and testing scripts
- Conduct in-depth testing of the Azure EDI solution

3

Analyze Benefits and Next Steps

- Identify and document the quantifiable benefits of the new EDI approach
- Develop a roadmap for converting all company EDI transactions
- Deploy a robust solution support infrastructure

From Manufacturing Plant to Dock to Dinner Plate

- Azure EDI handles all supply chain and logistics EDI workflows with impressive ease.
- TwoConnect knows just how to employ Azure EDI tools and capabilities to deliver second to none results
- Hundreds of TPE/B2B solution implementations using both X12 and EDIFAC EDI
- Experts in Supply Chain and third party logistics

Why TwoConnect for Azure EDI

EDI Experts

- Over 20 years experience in EDI implementation
- We know every segment, every element, and every delimiter so you don't have to

Azure Experts

- Managed Azure cloud Services employing internal tools and processes to handle everything for you
- Unparalleled Azure cloud expertise for EDI and TPE
