AI applications

OneBI is among the pioneers in Israel, developing unique projects for clients utilizing GPT technology.

OneBI has developed a dedicated unique platform called **GEKO Pro**, based on **OPEN.AI's GPT**.

which enables companies to evaluate and implement various AI solutions and integrate them into their workflow and services.

Our platform and solutions provide full support for the Hebrew language.

OneBI developed these solutions by implementing architectures built in collaboration with OPEN.AI and Microsoft.

To achieve this, we have established a special team of 10 employees.

Among our solutions:

1. AI-based chatbots tailored to business needs, including the collection and training of specific data sets.
2. Text and conversation analysis - processing long texts based on parameters and converting the information into a dashboard.
3. Intelligent search of organizational information - for example, searching for solutions to exceptional malfunctions or searching for names and codes of rare diseases.

Projects in progress

Shlomo Sixt - service bot

YES – general service bot

Meuchedet - connection to robots

GEKO.CO.IL website GPT3.5 in Hebrew

GEKOO.AI includes bots in Hebrew for small businesses

Solutions - AI-based chat bots

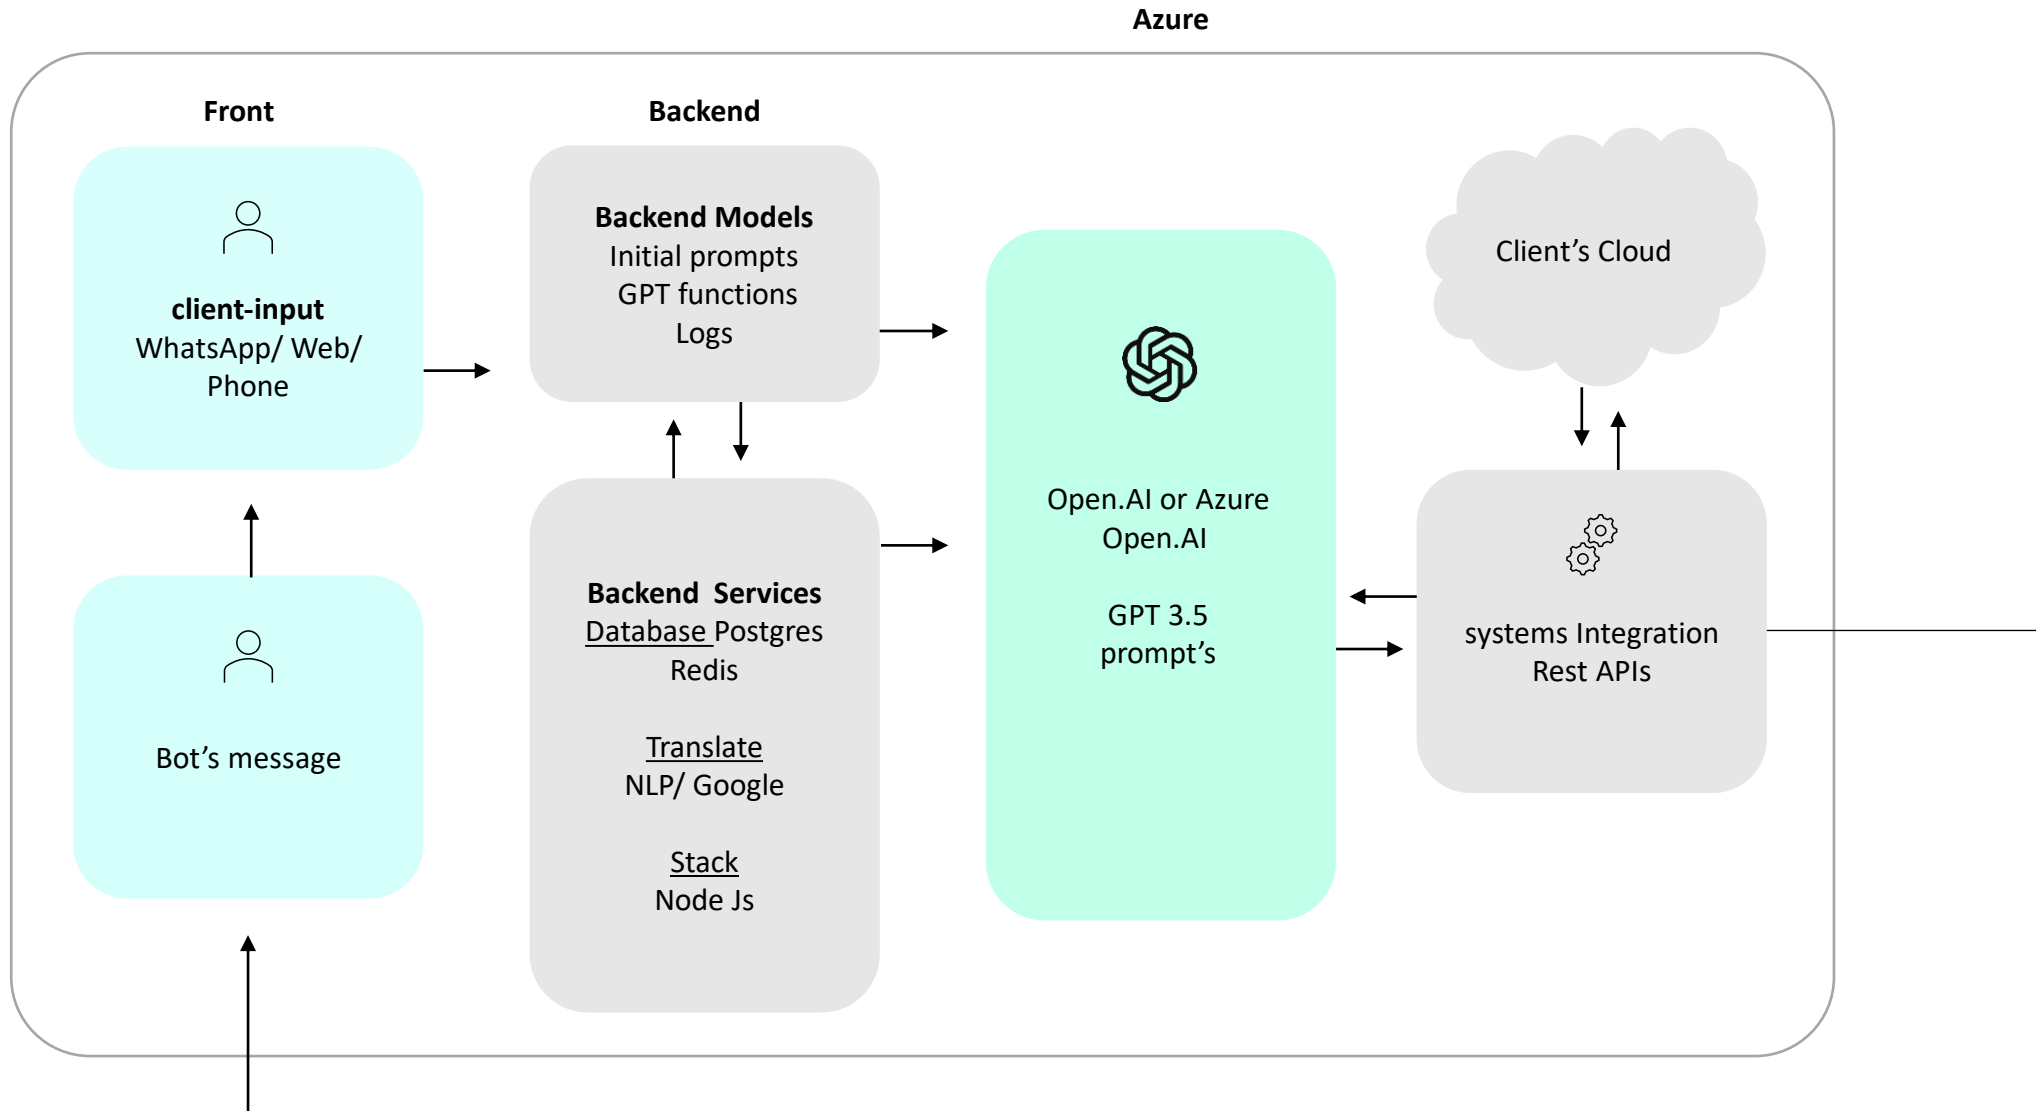

Introducing our versatile Chatbots:

1. General Chatbot
2. Recommendation Chatbot
3. Legal Chatbot

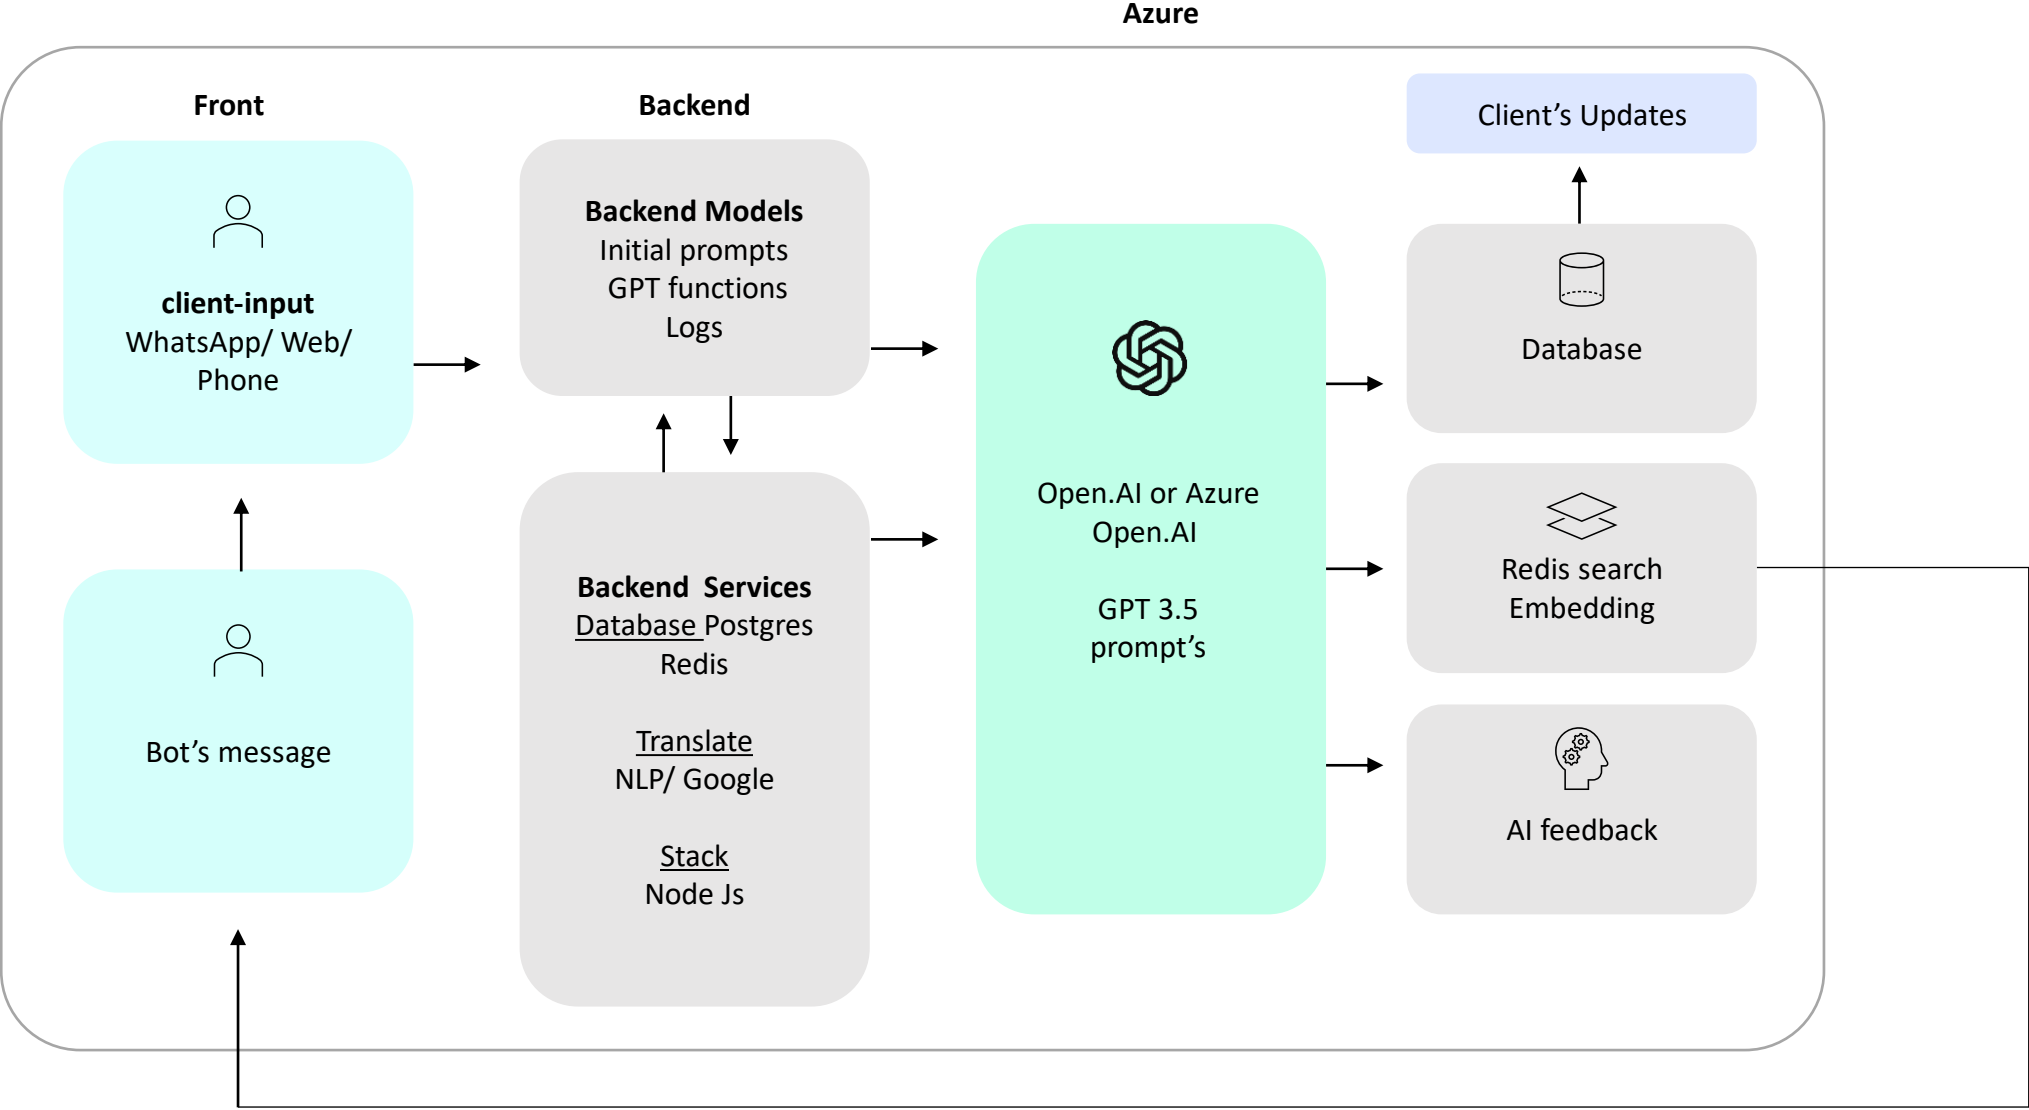

Our comprehensive solutions include a user-friendly interface that works seamlessly in Hebrew, with integrated capabilities for search, detection, recommendation, analysis, and simplification of complex texts. We can deploy each of these solutions on various platforms such as WhatsApp, web, voice calls, and more.

In our project planning, we take into consideration the costs associated with the use of different technologies to provide you with the most efficient and effective solutions.

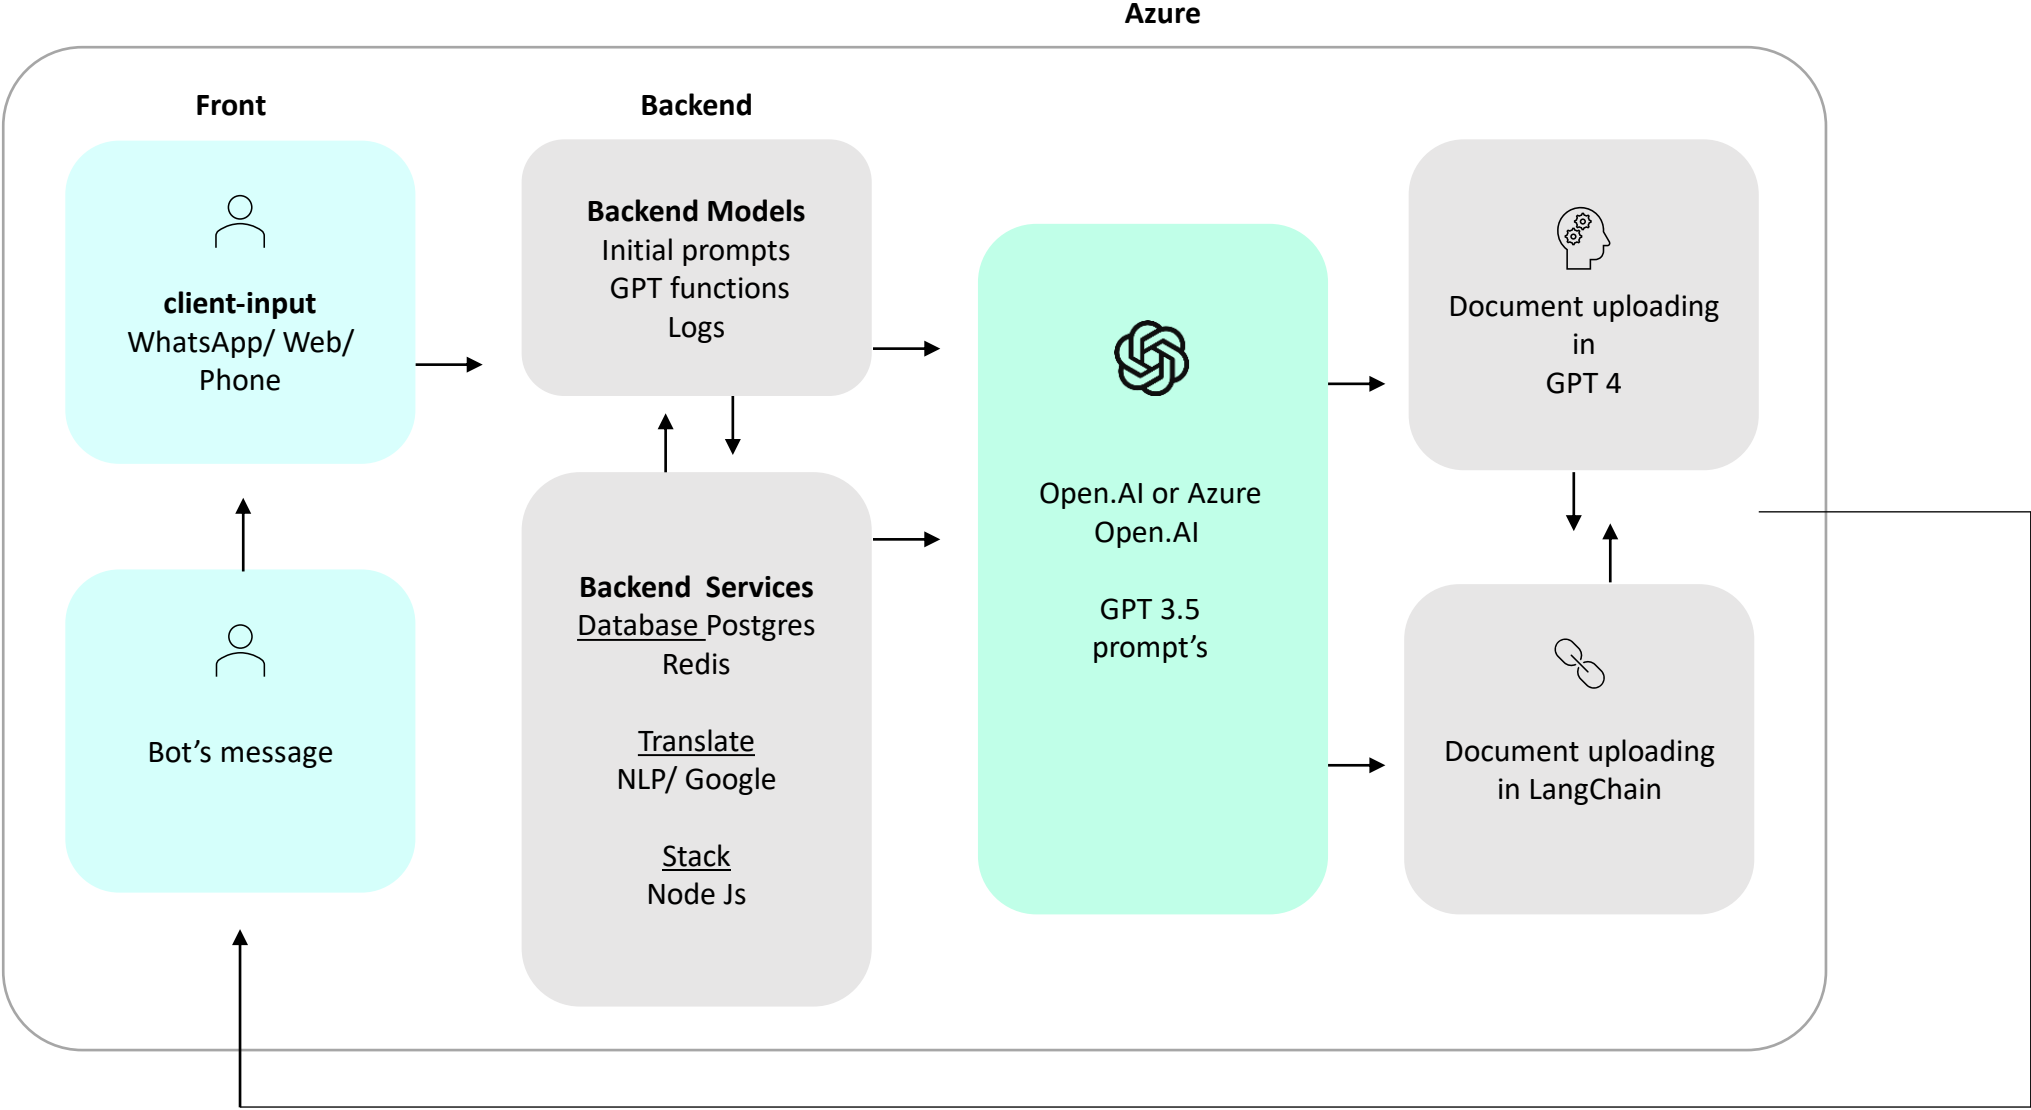

1. General Chatbot

2. Recommendation Chatbot

3. Legal Chatbot
