

*'To fight subversive crime we need to combine brute computing force with detailed human knowledge'*

## Scenarios against subversive crime

Subversive crime refers to illegal activities that undermine our legal structures with disruptive effects on society as a result. In the fight against subversive crime, the role of municipalities is crucial. While the data that may help municipalities become more resilient is readily available, readily applicable scenarios are not.

 **REGIO MONITOR** converts different data sources into operational scenarios that can be readily applied

 **REGIO MONITOR** enables you to recognize early signs of subversive crime and to respond appropriately.

 **REGIO MONITOR** offers real-time insight in the resilience of your community, and proactively informs you of changes

 **REGIO MONITOR** operates according to the following formula:

 **REGIO MONITOR** offers your community:

- A dynamic overview of the resilience your municipality, district, street or companies.
- A tailor-made action perspective in every situation in which undermining activities are identified.
- Data-driven prioritization for the approach to subversive crime in your municipality
- A central place where all scenarios, observations and action-perspectives stored

**Effectively, It makes your municipality an attractive business climate and a safe environment for residents**

### Sources **Pandora Intelligence** (a selection)

- Historical data of companies and locations
- Land Registry
- Media clippings and newspaper articles
- Chamber of Commerce
- Cadastral registration of property
- Register of deeds
- Insolvency register
- Social Media
- Etc.

### Sources **municipality** (a selection)

- Municipal building permits
- Environmental reporting
- Municipal Enforcement registry
- Personal Records Database
- Mortgage registry
- Etc.

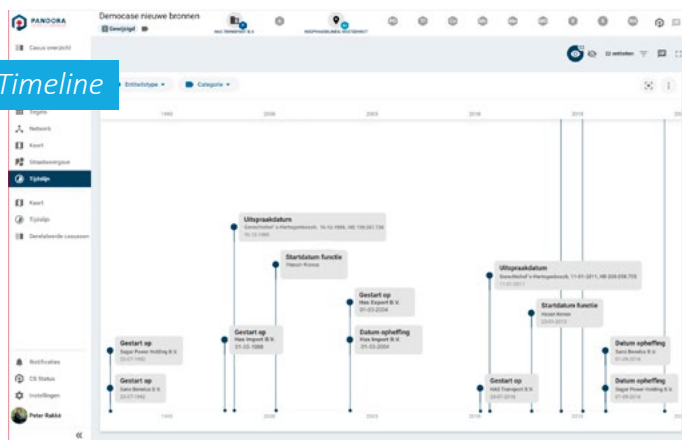

Scenario  
**resilience to subversive crime**

*'Regio Monitor takes care of the heavy lifting and processes very large amounts of data. This allows our analysts to do what they are best at and that is to interpret and assess complex situations'*

*'Regio Monitor increased the efficiency of my team 84 times !'*

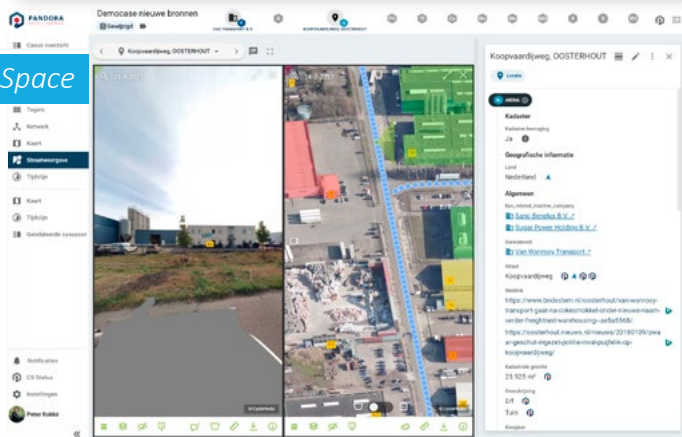

**REGIO MONITOR** generates an up-to-date picture of the resilience of your municipality. It identifies changes, relations and correlations between companies and provides insight into mutual connections. It visualizes data in the form of scenarios and presents data in terms of time, space and relation.

### Timeline

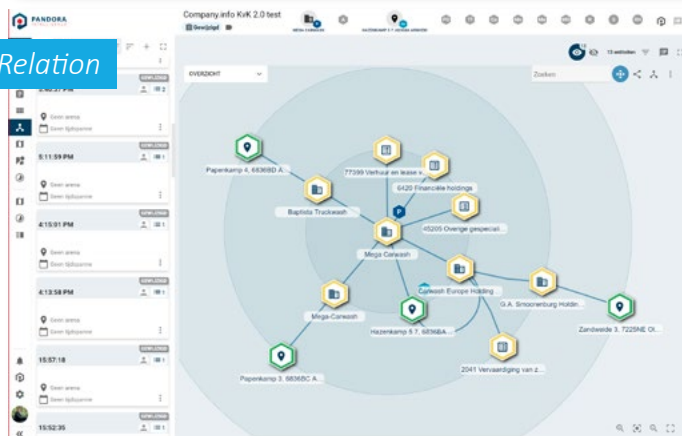

The **timeline-view** visualizes data that has a meaningful chronological order. The feature supports scrolling through time as well as zooming in and out to lower/higher aggregation levels. It logs the sequences of events and all the decisions that were taken. It may serve as briefing tool to new operators on duty, as a tool for collective learning and evaluation, and as a framework for future reference.

### Space

The **space or geospatial-view** provides a cartographic representation of the data. It includes integration of different geospatial layers and allows the integration of proprietary datasets and external Geo-graphic Information Systems. Moreover, it presents optimal routes for enforcement personnel and allows the interactive planning of resources.

### Relation

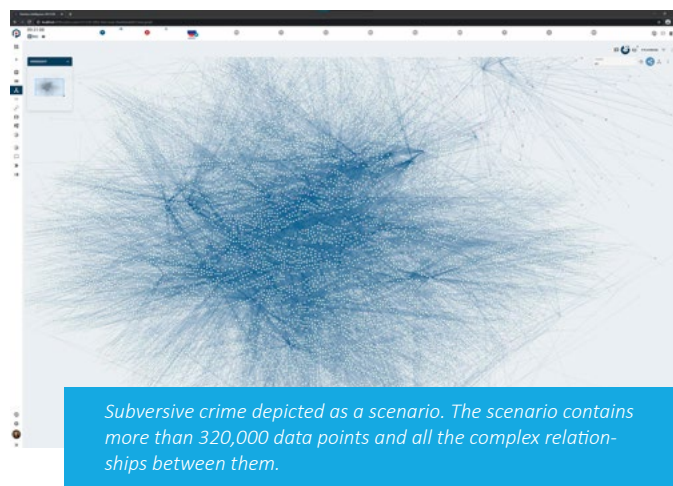

The **relation-view** visualizes correlation in data. It adds value to individual datasources by discovering the relationships between them. It allows relevant plans and mitigation strategies to be included in the process and allows for comparison with historic cases. This feature provides teams concerned with fighting subversive crime with the ability to discover relations in data that cannot be found by human operators.

## Scenario methodology

The scenario methodology of Pandora Intelligence includes twelve scenario-components that encompass hundreds of thousands of subcomponents. It includes the complex relation between all these subcomponents, such as the interactions between characters, goals, motivations, modi operandi, symbolism, and resistances that have to be overcome. The scenario methodology of Pandora Intelligence allows every past, present and future incident to be translated (automatically) into individual scenario-graphs as depicted below.

It is important to note that while scenario-graph of every individual incident has a different shape, the structure of all scenarios is generic. This allows to mathematically combine, compare and contrast different scenarios (past, present or future) with each other. It enables extremely large amounts of data to be analyzed in realtime and in doing so, enables the discovery of relations that have been obfuscated in data throughout history.

## Pandora Intelligence

Pandora Intelligence is an independent intelligence company, specialized in security risks. It provides the latest generation of analysis software to Law-enforcement agencies, Governments and ministries, Newsagencies, Intelligence services, Military organisations and Safety regions.
