## DESCRIPTION

Microsoft's ever evolving Azure Cloud Platform provides more than 200 products and services to solve today's challenges. With Azure you can build, run and manage applications across multiple clouds, on-premises and at the edge, with the tools and frameworks of your choice.

When done right adopting Azure and migrating your workloads to the cloud has many benefits. Modernising your applications and adopting a modern cloud aligned mindset and practice will allow you to make your workloads more resilient, cost effective, secure and enables you to scale up or down as your requirements change.

To adopt Azure we first need a clear PLAN. We need economic data to support a business case and a technical roadmap to ensure we can successfully adopt Azure and start migrating services.

Our 5-day Plan for Success session provides all the information you need to understand and get started on your migration. Based on your environment and requirements we will choose the right tool to extract the data required to build the plan.

Having established, migrated and optimised a wide variety of clients, our experienced experts have all the right knowledge to help you:

-  Analyse your systems and collate information required to build the plan
-  Build an operational economic model
-  Understand migration costs & timelines
-  Understand foundations and governance
-  Provide guidance on a modern, DevOps aligned mindset
-  Assess readiness for your apps and resources
-  Help you modernise and choose the right services in Azure
-  Build a technical roadmap
-  Finally, Plan for Success with Azure

At conclusion, we will provide your organisation a report giving you **CONFIDENCE** in your readiness to adopt your Azure environment.
