

Modern Phone System 365

The evolution and modernization of phone system

The modernization of conventional phone system basically lead to the modern scenario because telephone numbers follow users across locations and devices.

Current telephony modes of use as well as technical options could determine different scenarios and implementation costs. Therefore, a preliminary analysis of required steps is necessary.

Microsys's solution, Modern Phone System 365, based on Microsoft Teams, guarantees the adoption of a new work environment with all the features for advanced business collaboration integrated with the telephone switchboard in the Cloud to significantly improve the company's ability to communicate internally and externally.

Improve communication and business collaboration

Improve productivity with a chat or video call

Use the chat window to have quick conversations with colleagues and start a video call with screen sharing.

Facilitates communication and collaboration

Schedule and conduct meetings online by showing files to review while keeping track of notes and things to do.

Stay connected, anytime, anywhere

Easily respond to chats, join conversations, meetings, and collaborate remotely.

Improve communication and collaboration outside the company

Make and receive phone calls

Make and receive PSTN phone calls with the security and reliability that Microsoft provides.

Manage centrally

Provision users, assign phone numbers, and port existing numbers from the Microsoft 365 admin console.

Get secure, reliable, and optimal calls.

Modern Phone System 365 is Microsys' solution to provide employees with the virtual calling capabilities they need, with the security and reliability that Microsoft Teams provides.
