

DrDoctor Video

DrDoctor Video enables remote consultations controlled from your PAS.

Clinicians can run mixed clinics and swap between appointment formats while patients can easily join on a web browser, phone or tablet device.

With automated reminders and secure video links, both patients and clinicians arrive prepared for their appointment.

Why it works.

Integrated everywhere

Seamlessly integrated into your system, reduce the need for manual admin including set up and reminders.

Cater for complexity

Facilitate multi-disciplinary medical teams with up to 30 participants for even the most complex cases.

Remote care in one place

Run mixed format clinics from the same platform and easily swap between appointment formats.

Made for patients

Digitally integrated care journeys reduce DNAs by engaging patients and ensuring they are ready for remote pathways.

Automate reminders

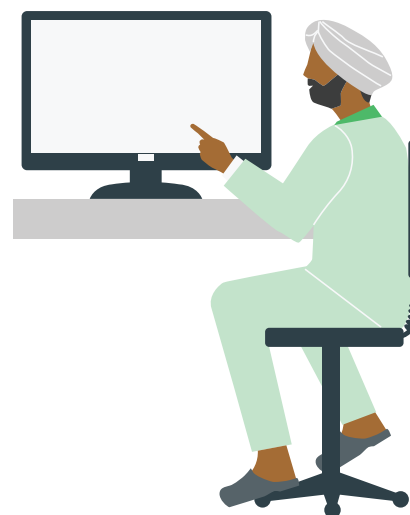

Send a notification when an appointment is set as video and booked, with further reminders set for up to 1 hour before.

How it works.

DrDoctor Video is built for healthcare - run remote clinics directly from your PAS via the DrDoctor Video API.

Each appointment link is unique and automatically shared ensuring patients can test their setup and arrive confidently prepared for their appointment.

Host privileges allow you to notify patients if you are running late as well as basics like muting, screen sharing and chat functionality.

50 million+
appointments
managed

10 million+
