

# Server Infrastructure: 2-Days Workshop

**Primary Product:** Azure; **Pricing:** \$1,000.00

## What is it?

Cloudica's Workshop is designed to teach IT professionals the basics of modern server standards, present the current tools on the market, and translate the current needs of the company into real and tangible solutions.

## Who is this for?

Is your company growing? Would you like to understand the basics of setting up and maintaining a server infrastructure in a safe, cost-effective and elastic manner. We designed this workshop for IT professionals who need to become familiar with Server Infrastructure basics.

# Server Infrastructure: 2-Days Workshop

**Primary Product:** Azure; **Pricing:** \$1,000.00

## What do we offer?

We offer a comprehensive overview of the latest Microsoft tools to plan, deploy and maintain a cloud infrastructure that is:

- Secure
- Flexible
- Expandable
- User friendly
- Adaptable

## What are the benefits?

Cloudica taps into our 15 years of experience in rolling out cloud solutions for a wide range of clients in numerous industries including finance, medical, manufacturing and utilities. We know the best way of creating the most efficient cloud solutions. In this workshop, we have condensed our knowledge to provide professionals with the essentials to manage the development of a cloud solution that exactly matches their needs.

## Steps and agenda:

- A deep dive on the Microsoft-Azure based cloud infrastructure solutions
- A presentation on the best practices used by companies today to develop a solid and safe infrastructure
- An outline on how to best manage a successful development.
- A presentation on the basics of how to maintain a working cloud infrastructure
- Q&A session

# Server Infrastructure: 2-Days Workshop

**Primary Product:** Azure; **Pricing:** \$1,000.00

## What are the benefits?

This workshop gives a strong hands-on experience for understanding Microsoft Windows Server Infrastructure and is intended for people who need to show fundamental day-to-day administration and configuration abilities necessary for administering servers.

## Outcomes of this workshop

Our workshop teaches your IT team the basics of installing, maintaining, and configuring Microsoft Windows Servers. We have designed this brief course around explaining the foundations of the technology and overseeing hands-on laboratories.

## Steps and agenda:

This Server Infrastructure workshop uses hands-on training. Participants will learn how to install and configure Windows Server Infrastructure just as a network administrator or networking consultant. In this workshop you will learn how to:

- Install and configure a Windows Server
- Set up a Windows Server roles and features.
- Set up Windows Server Domain Controllers
- Configure Workstations policy to your Domain
- Set up Group Policy Objects (GPOs) using Group Policy Management
- Set up users, groups and OUs
- Upgrade Windows Server to a new version
