

**Innovator In Sustainable Finance Data
and Climate Risk Analysis.**

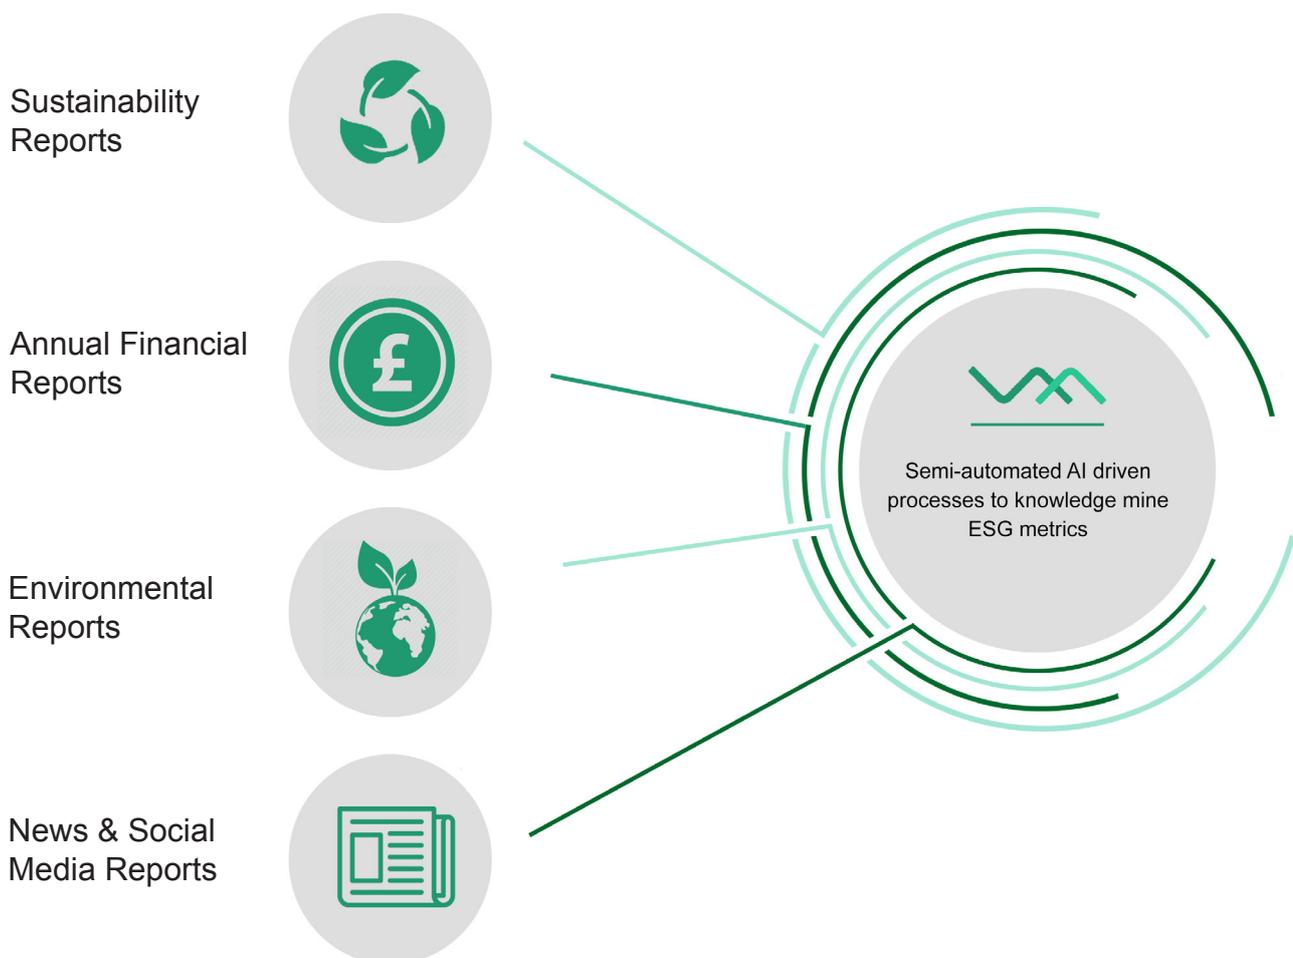

INTRODUCING SUSTAINABILITY STUDIO

Sustainability Studio is an innovator in the sustainable finance data and risk analysis space, benefiting from years of experience in data science, agile development and climate data.

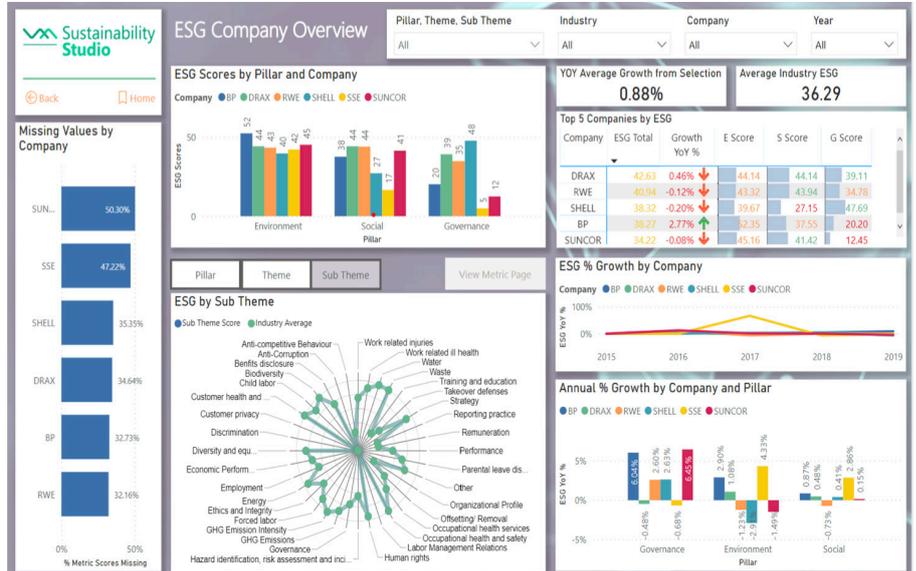

Leveraging semi-automated AI driven processes, via Azure Cognitive Search and Cognitive Services, Sustainability Studio mines a range of public domain structured and unstructured data.

Increasingly we also incorporate alternative, complex data sources including Satellite and Microsoft Planetary Computer data to provide advanced analytics, adding scientific fact to public data.

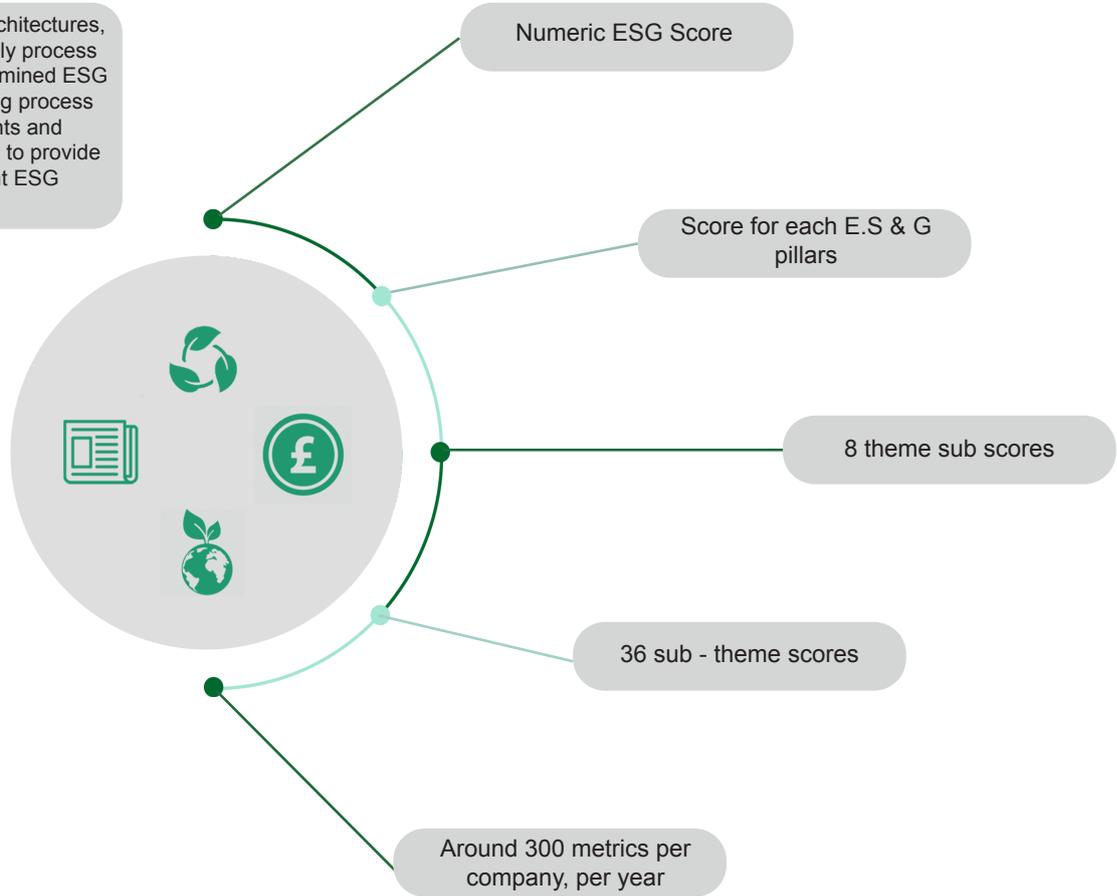

CREATING ACTIONABLE INSIGHT

Making sense of the data that we ingest and analyse is our foundation – once the data is validated and audited, it is fed into our custom built, dynamic ESG scoring process. Through the application of a series of weights and normalisation we output: a numeric ESG score, a score for each of the E, S and G pillars, 8 theme sub scores, 36 sub-theme scores and around 300 metrics per company, per year.

Using scalable Azure Architectures, we are able to seamlessly process hundreds of knowledge-mined ESG metrics. Our ESG scoring process applies a series of weights and normalisation processes to provide accurate and transparent ESG scores.

SOLVING THE DATA CHALLENGE

Sustainability Studio has been built on a foundation of transparency of methodology and scoring weights. This begins to address some of the biggest challenges in ESG data integration and adoption, 63% of Asset Managers having voiced data (in various forms) as their primary concern.

Having this data may be a major challenge, having it in the right format at the right time delivered in the right way is also a headache. We deliver our data in a number of ways that suit a growing number of workflows and user profiles, from Data Science to Wealth Advisors.

Leveraging the flexibility of dashboards designed to give you a view across industries, portfolios or themes in an instant, to APIs created with Data Strategy, Quantitative approaches and Data Science models in mind.

ADDRESSING COMPLEX WORKFLOWS

ESG Data integration into traditional Financial Services workflows has many interpretations and each institution has their own ESG profile, mandate or methodologies to cover. The transparency of our data and ability to deliver improvements means we can react quickly and address workflows and they morph and change. Below are key workflows that we solve.

However you may approach sustainability, our unrivalled combination of science and experience means that we have the tools and people to enable you to get the most out of Environmental, Social and Governance data.
