fruut

Your AI-powered digital assistant for meetings

With conference calls becoming the norm for collaboration between teams, accurate meeting notes and assigning actions on the spot have become critical in our day-to-day roles. Focusing on these administrative tasks post-meeting can be time consuming and can lead to delayed progress and low visibility of actions.

With a world-leading word error rate **customised to your industry**, Fruut will capture the audio from the meeting and provide a **transcription**. You can ask Fruut to **capture any actions** that can be assigned to individuals together with targets for completion, ensuring **efficient and productive post-meeting actions**. It also provides a **summary** based on the transcript it has captured post meeting so that you are you able to understand the main topics of the meeting without having to read through the entire transcription.

Why Fruut?

- **Increase visibility** of meeting outcomes and actions assigned to wider team

- Increase **productivity and efficiency** by automatically assigning action during the meeting and tracking them

- Save precious admin time in order to **focus on high value tasks**

- Facilitate **process improvement**

- **Increase collaboration**

Your digital assistant will

- ☑ **Be optimised for Microsoft Teams/ Microsoft Planner**

- ☑ **Engage in dialog to gather missing information and clarify ambiguous comments**

- ☑ **Dispatch actions to team members**

- ☑ **Highlight important decisions from the meeting**

- ☑ **Generate an abstract of the key points of the meeting**

- ☑ **Generate editable real time transcript for audit purposes**

- ☑ **Enable privacy mode**
  – Pause listening mode
  – Delete last sentence

- ☑ **Be tailored to industry specific ontology**
