INCRIUS | IT ARCHITECTS
Quite possibly you'll like us

LEARN FROM THE EXPERTS, DOWN-TO-EARTH DEMYSTIFICATION AND DEMO OF AZURE STACK HCI AND ARC IN YOUR ENVIRONMENT OR SPECIFIC USE CASE.

Incrius NV – your IT-sparring partner

Get future-ready, and ease-of-mind, with the Azure Hybrid Cloud solutions

With more than 40 years of experience, Incrius evolved from a classical on-prem (virtualized) infrastructure provider to a hybrid-cloud infrastructure partner.

What is Azure HCI? Azure Stack HCI solutions are prebuilt and typically either preconfigured or bundled with simple configuration software A new hyperconverged infrastructure (HCI) operating system delivered as an Azure service that provides the latest security, performance and feature updates in collaboration with hardware partners

What's the difference with Azure Arc? Azure Arc is a software solution that enables you to project your on-premises and multicloud resources, such as virtual or physical servers and Kubernetes clusters, into Azure Resource Manager. With Azure Arc's hybrid and multicloud solutions you manage your resources as if they're running in Azure, using a single pane of glass to manage your entire data estate. Azure Stack is a hardware solution that enables you to run an Azure environment on premises.

Services provided by our professional team:

1-Day Workshop: Interactive session where we teach you the basics, lessons learned and how your environment could benefit. Topics that we will talk about: Azure Stack HCI fundamentals; Azure Stack HCI operating system; Scale-out storage; SDN-based virtualized networking; Integration with Azure Arc; Azure Arc enabled servers, Kubernetes, and data services; Azure Stack HCI validated hardware from OEM partners; Azure Cost and licensing requirements; Use case scenarios.

1-Day Azure Arc Live demo: On this day one of our engineers will live demo you how to: Enable Azure Arc resources; Management for client Deployment; Multi OS management; Patch management with Azure Arc; Azure Arc Policies
