- OpenAI & AI Workshop
- Proof of Concept
- Project Implementation

1. Consultations with AI / Open AI Architect

Consultations with AI / Open AI Architect description

- Meeting with an experienced OpenAI architect & AI expert lasting from 2 to 4 hours, aimed at **understanding the challenges and possibilities related to AI technology** in the context of your organization.
- During the meeting, we will discuss the potential **benefits of implementing AI, identify areas where AI can bring the most outstanding value, and address any concerns and doubts.** Together, we will explore how AI technology can contribute to achieving business goals and enhancing the company's competitiveness in the market.

Consultations with AI / Open AI Architect scope of work

- **An individual report** containing an analysis of the client's needs, potential applications of AI in the organization, recommendations for next steps, and an overview of available AI/OpenAI technologies and tools.
- This report will help the client better understand how AI can be utilized within their operations and what potential benefits exist.

Consultations with AI / Open AI Architect summary

- These consultations are an ideal solution for clients considering implementing AI technology but unsure how to do it or what benefits it will bring to their company.
- The meeting aims to address any doubts, discuss potential AI implementation opportunities, and provide recommendations that will assist the client in making informed decisions about their next steps.
