DevOps with GitHub POC

Four-Week Implementation and POC

The technology landscape is transforming at a pace never seen before and will continue to do so in the coming years. The case for digital transformation has never been so urgent. In fact, the next decade of economic performance for an organization will be defined by the speed and progress of their digital and cloud journey.

Digital-native companies have been setting up modern agile development practices, but many technical organizations are spending more than 80% of their time just managing legacy infrastructure and processes.

DevOps is the recommended and flexible solution for enabling enterprises to keep up with and anticipate customer needs and next-generation IT. When implemented correctly, DevOps helps break down barriers between development and operations, improve speed through automated delivery, improve process optimization, promote iterative improvements, and enhance security.
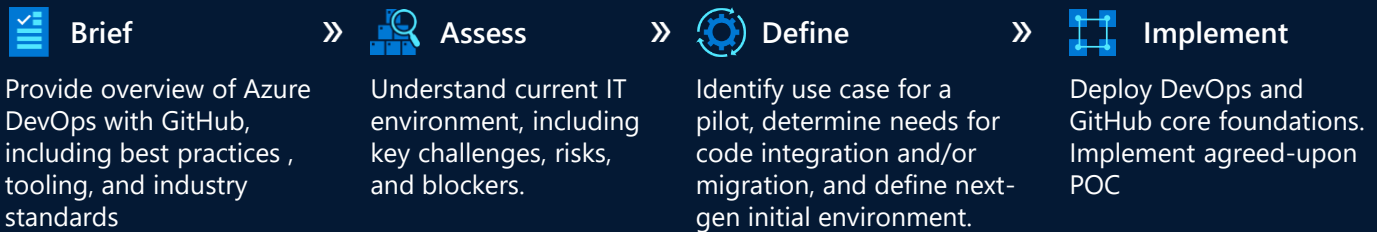

Top performing DevOps companies spend **66%** more time on new work rather than on customer support and security issues addressing
– State of DevOps Report, 2018

Accelerate your journey to adopting DevOps as the new IT operating model

In this engagement, our experts will walk you through modern DevOps practices with Azure and GitHub, identify the current state and create a go-forward plan to a modern DevOps practice. We then identify a POC and implement it as a demo project, setting up your core DevOps foundations along the way.

Our Delivery Process

Brief	»	Assess	»	Define	»	Implement
Provide overview of Azure DevOps with GitHub, including best practices , tooling, and industry standards		Understand current IT environment, including key challenges, risks, and blockers.		Identify use case for a pilot, determine needs for code integration and/or migration, and define next-gen initial environment.		Deploy DevOps and GitHub core foundations. Implement agreed-upon POC

Final Deliverables

Duration: 4 Weeks   Cost: $40,000

Review assessment and go-forward Roadmap   DevOps and GitHub foundations and POC
