

MICROSOFT AZURE SOLUTION BUILDER PROFILE: Atmosera

The Atmosera DevOps Pipeline Platform is an Azure development environment for continuously developing, testing, releasing and maintaining applications. It includes preconfigured CI/CD tools, test environments, automation blueprints, leading practices and security features. It can be used to increase development velocity and increase the speed of adoption, as well as reduce the cost of your DevOps infrastructure.

WHAT WE OFFER

Atmosera aims to create a partnership between development teams and operations to quickly deliver solutions. Our practice of Azure DevOps ensures that operational requirements like SLAs, Azure resource deployment, monitoring, and maintenance are defined and met collaboratively.

Accelerate Time-to-Market

- Develop new features and capabilities faster, while ensuring that they will not break the site or application as code gets promoted.

Reduce Manual Quality Control

- Copy key-based databases from production to staging, test, and development without interrupting live environments.

Increase Test Coverage

- As new functionalities get deployed, easily integrate them as part of the automated testing plan.

Leverage Our Entire DevOps Solutions

- Release Management as a Service
- Test Automation
- Azure Automation
- Application Performance Monitoring
- DBA as a Service

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible, enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
