

DevOps Assessment

Service description, benefits and deliverables

Assessment deliverables - What will you get?

CURRENT STATE REPORT

Observations and benchmarks for DevOps and automation capabilities aggregated from focus areas

KEY RECOMMENDATIONS & DETAILED INSIGHTS

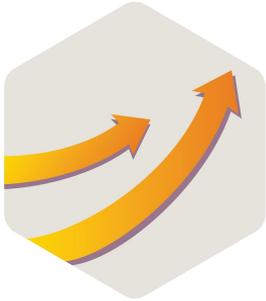

Primary areas for improvement including recommendation cards, graphs & industry comparison

NEXT STEPS & ROADMAP

Transformation roadmap - suggestion of the recommended improvements

Assessment inputs - What we need from you?

Kickoff Workshop

2 hrs

*Aligning management
and key stakeholders*

Interviews

2 hrs per person

*Discussions with
persons (~4 - 12) in
scope of assessment*

Comment rounds

1-2 hrs per person

*Report review online +
pre-finalization
meeting*

Presentation

2 hrs

*Report including
recommendations
roadmap*

The assessment is a collaborative effort

Based on mutual understanding of company's business strategies and current DevOps capabilities, we will together produce a realistic roadmap of improvement steps

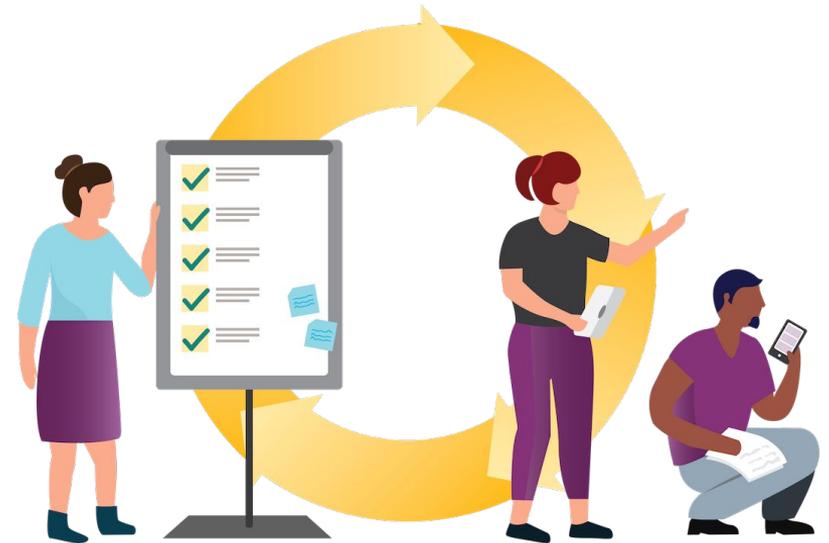

Who should be interviewed

- Interviewees should include people working on different areas, e.g.
 - Management
 - Product owners
 - Architects
 - Developers
 - Operations engineers
 - Quality assurance specialists
 - Business stakeholders
 - UX specialists
- Preferably people with a broad overall knowledge of the situation (management, product owners, architects) should be interviewed first

Challenges addressed by the DevOps Assessment

- Which improvement areas should we concentrate on?
- How do we identify activities that are easy to start and yield highest possible impact?
- How to reduce risk in our customer delivery process?
- How well are we progressing in our current improvement initiatives?
- What kind of roadmap is the best fit for our business and situation?

Insights from DevOps Assessment

- Get a baseline of your current software delivery and operational performance
- Invest in the right initiatives
- Compare with insight from industry best practices
- Track & drive your improvements
- Get everyone to the same page about DevOps and agility

Benefits from DevOps Capabilities

- Improve capability to innovate
- Manage risk more effectively
- Decrease time to market
- Reduce cost of change
- Deliver better quality
