

Aquila Clouds FinOps Platform

Establish a FinOps practice with observability, AI-enabled automation, policy-driven governance and self-service communication.

[Aquila Clouds FinOps Platform](#) enables you to bring financial accountability to the variable spend model of cloud, with observance of performance characteristics of your cloud deployments. Our capabilities in **observability, optimization and automation, governance and communication** empower distributed, cross-functional teams to make business trade-offs between speed, cost and quality.

Highlights of Aquila Clouds FinOps features

- Near real-time observability of cost and performance metrics
- Automated actions for cost optimization, including resource startup / shutdown schedules
- Financial domains for project management, budget control and chargeback enablement
- Self-service portal with RBAC control
- ML-based cost forecasts for capacity planning
- In-platform URL-based report sharing

Product support and integration

- **SaaS platform.** Option to deploy in customers' cloud.
- **Multi-cloud support.** AWS, MS Azure, GCP, OCI
- **ServiceNow** and **PagerDuty** integration
- **Okta** integration
- **Role-based access**

Benefits for cloud organizations

FinOps has become a non-neglectable discipline for cloud organizations. This discipline cannot be achieved by humans alone. It requires deep analyses of massive cost and performance data, along with AI/ML models for the practitioners to adopt the most accurate and just-in-time actions. By using Aquila Clouds, your organization can potentially reap the following benefits:

- Enable **digital transformation** with cost and performance controls. **Faster time to decisions** and remediations saving operational costs (OPEX) and improving profitability.
- **Save** hundreds of thousands of dollars, ranging from **25 to 75% of total cloud spend**.
- Provide near real-time observability and visibility in (unexpected) cloud costs, wastes, and future trends for **faster containment of cost sprawls**.
- Allow **self-service** amongst FinOps practitioners who now can manage at least 10x more cloud footprints.
- **Automate** budget controls and policy implementations in federated organization structures, driving **compliance and company policy adherence**.

About Aquila Clouds

At Aquila Clouds we embrace the paradigm of Continuous Monitoring and Continuous Optimization (**CMCO**). Regardless of where you are in your cloud development and deployment, we provide you with the capabilities to ensure a smooth daily operation. Whether you are a CFO or finance manager at an enterprise company looking for better finance governance, or you are a cloud reseller looking for better billing productivity and profitability, or you are a cloud operator looking to improve your daily workflows, Aquila Clouds has you covered.
