

Dell Technologies services for Dell EMC Integrated System for Azure Stack HCI

Accelerate your journey to Microsoft Azure Hybrid Cloud

The need for agility to thrive in today's digital economy

Organizations of all sizes are experiencing unprecedented increases in the number of workloads they manage, the complexity of those workloads, and the number of options available to host those workloads.

At the same time, the increase in remote work and remote support requires the datacenter to process data across dispersed geographies. Users need access to essential data from anywhere around the world, 24/7. It's up to IT staff to make sure each task, each process function and each piece of technology runs smoothly and securely, while also managing cost.

Take advantage of cloud and on-premises resources

Dell Technologies and Microsoft have partnered to provide solutions that enable hybrid and edge computing applications to be built and managed consistently across locations, providing choice and flexibility to address diverse workload needs. With Dell Integrated System for Microsoft Azure Stack HCI, users consume Azure Stack HCI in the same way as Azure cloud instances, but the infrastructure lives on-premises.

50%

of organizations cloud and infrastructure approach is too centralized¹

60%

state that cloud capabilities have helped their organization achieve revenue growth²
