

Analysis of data strategy potential

Challenges for companies

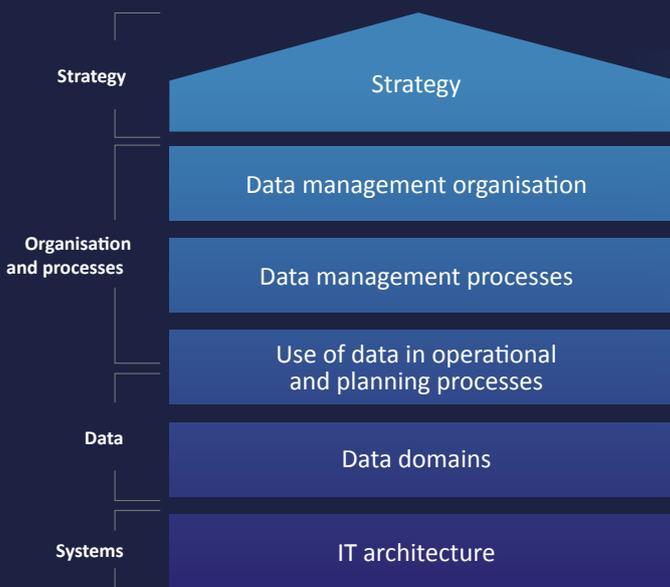

- How important is data for corporate development?
- How can data help to optimise business models?
- How do you set up the organisation, responsibilities, and processes for dealing with data?
- Where do you begin and what solutions are available to help?
- How do you find an IT infrastructure that suits your corporate strategy and business models?

b.telligent's areas of expertise

Specialist framework

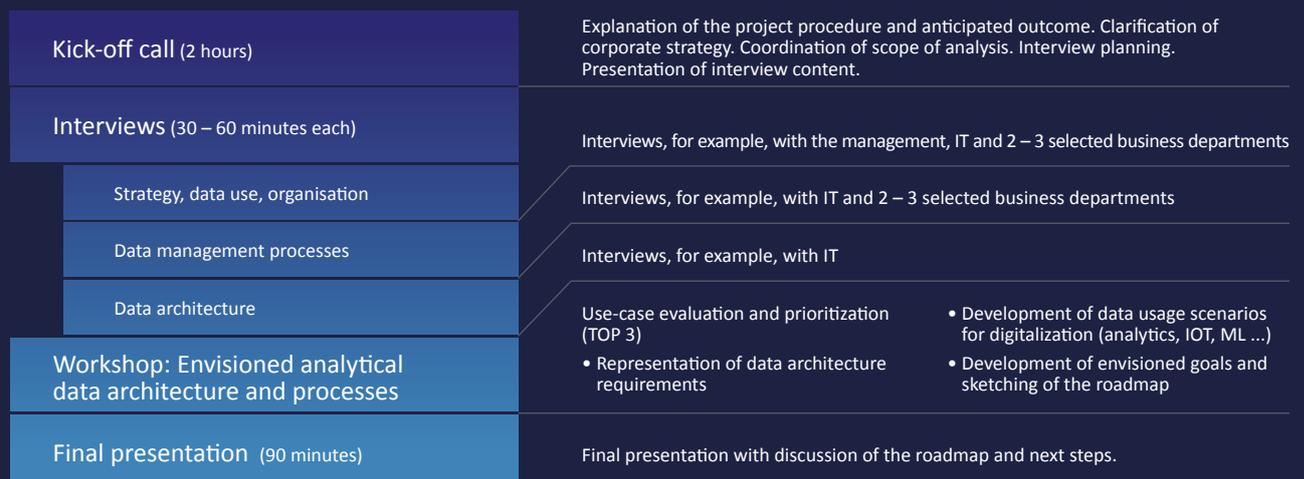

Project results

- **Roadmap: From data strategy to target data architecture, processes and organisation;** identification of fields of action and associated measures for implementation, including initial assessment of costs/benefits
- **Document the current state** and classify into best practice models for data management organisations and roles
- **Data-management process map** with gap analysis of best-practice data-management processes (MDM, DQM, metadata management)
- **Registration and documentation of the bandwidth of data-driven use cases** (reporting, analytics, IOT, ML ...) in business processes; classification into best-practice models
- Creation of a **data-domain model at the first level**
- Actual situation of core data architecture at the first level (operational, dispositive, analytical)
- **Target data architecture** for analytical infrastructure, **including development procedure and initial estimate of effort**

Project procedure

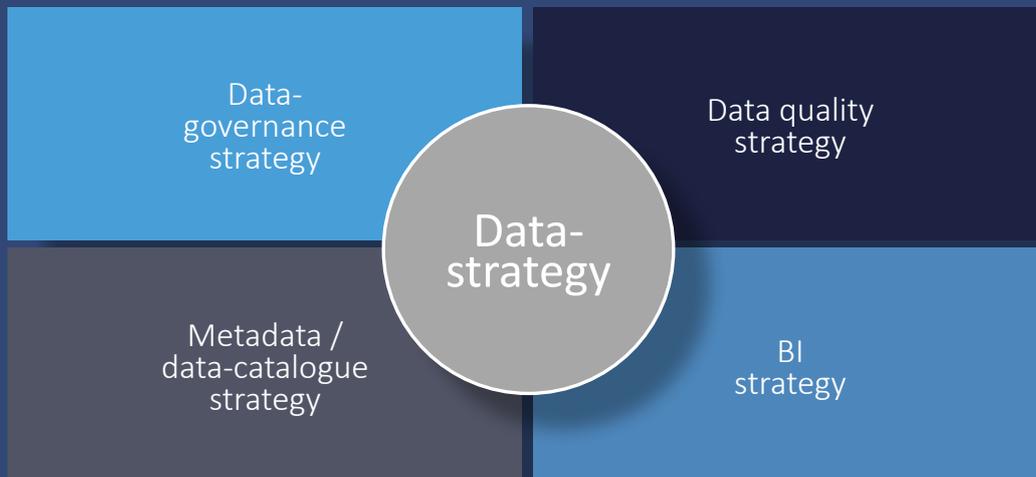

Time period: 2 - 4 weeks

Our data-strategy consultancy portfolio

Services

We offer our clients comprehensive consultancy. In accordance with their needs, we concentrate on one or more focal points in the area of data strategy:

About b.telligent

b.telligent is a technology-independent consultancy specializing in business intelligence, customer relationship management, data warehouse, big data, data science and cloud technologies.

With over 250 employees at seven locations in Germany and Switzerland, b.telligent supports companies in all phases, starting with strategy, proceeding through analysis, design and implementation, right up to operation and advancement of solutions. The focus here is on optimising digital and data-driven business processes as well as customer and supplier relations.

The business magazine brand eins Wissen distinguished b.telligent in 2021 for the sixth consecutive time as one of Germany's best consultancies in the category of „data analytics & big data“.

FOCUS Business also named b.telligent in 2021 as one of the top consultants in the areas of analytics & big data, digitization, IT consulting / implementation, as well as the sectors comprising automotive, banking and private equity, chemicals, life science and pharma, commerce (including e-commerce), advertising, marketing & media, telecommunications and insurance.
