# If you want to bring your SharePoint environment to the cloud, you need to know it

Most SharePoint environments have evolved over time and their admins have probably changed several times. This leaves you with a lot of blind spots, so that a migration to the cloud can become a total nightmare. To avoid this, you need to know by heart how your environment looks like.

## CHALLENGES

Big, complex and diversified SharePoint environments that have evolved over time and nobody really has a clear overview on:

- Architecture
- data
- customizations

## IDEAL SOLUTION

A complete overview on sites structure, data structure, usage analytics and customizations.

Definition of future, modern work style and a clear roadmap on how the SharePoint farm can be migrated.

## Desired OUTCOMES

SharePoint farm analysis report, findings and recommendations, best practices and a migration strategy for your SharePoint farm to the cloud.

## SharePoint migration roadmap

With a comprehensive analysis, best practices and experts' knowledge we can define a clear migration strategy to the Microsoft clouds.

1

### Know your SharePoint farm

Before you can start thinking about migrating your SharePoint farm, you need to know every aspect of it.

2

### Get a clear migration strategy

In a migration roadmap, customer gets a clear migration strategy to the modern Microsoft365 collaboration environment.

3

### Do not just migrate 1:1

SharePoint is not equal to SharePoint. We need to take into account that there is SharePoint classic, modern and MS Teams.

# Experts Inside SharePoint assessment for Microsoft 365

Today, working in on-premises environments, is called old world. There are modern work-styles that involve more than just saving some files to a collaboration system. Migrating a SharePoint server to Microsoft 365 is like teaching a dog to fly.

## Know what you have

Exactly know your current collaboration environment incl. all customizations and possible pitfalls.

## Know where to go

Migrating SharePoint involves a lot of future planning as migrating 1 to 1 is not the same as migrating 1 to many.

## Know how to do it

With a clear migration strategy of Experts Inside, you will exactly know how to migrate from old to new.

# Customer in the chemical industry migrated his SharePoint successfully

Experts Inside performed a SharePoint Assessment with the customer and worked with him on a migration strategy to bring the data not only to the cloud, but define what the best future place (SharePoint Classic, Modern or Teams) could be.

## Save a lot of time

Nearly 80% of the data did not have to be migrated, as collaboration on it has stopped a long time ago. We were able to delete or archive it without big effort.

## Find the right target

With analysis of end-user behavior we were able to identify SharePoint sites that were best for future collaboration in Microsoft Teams.

## Define repeatable routines

By classifying migration sources we were able to create simple and repeatable migration routines for each content class.
