

KINLY NETWORK AND TEAMS READINESS

Ensure your chosen solutions are right first time with careful planning in consultation with Kinly's network specialists.

Here at Kinly, we're determined to take the complexity out of selecting, designing and installing your Microsoft Teams Rooms solutions. For us, that means getting it right first time and providing solutions that can be easily and effectively used by your people from day one. As experts in both audio-visual and IT, we're well-placed to do just that.

Working in consultation with our network specialists, we'll make sure your systems are configured for modern collaboration. We'll take a dive into your existing set up and standards, and advise on where you could make improvements to get the very best from your investment. From the basics, like ensuring you have the bandwidth to run Teams effectively, to more technical elements, like consulting on security measures and the configuration of accounts, our team will do it all.

After more than 20 years in the industry, we know that many businesses find modernising their audio-visual estates challenging. But we know the value of ensuring network and Teams readiness far outweighs the challenges. Ultimately, this process reduces risk. It reduces the risk of system failures, limited adoption, delayed deployment and more. Best of all, it ensures your new solution works for not just existing processes, but your technology and, of course, your people.

WHAT CAN YOU EXPECT FROM KINLY'S NETWORK EXPERTS?

Your network sits at the core of every single Microsoft Teams Rooms solution, so it's vital that you're set up to make the most of the collaboration technology at your fingertips. This is a vital step in the process from ideation to adoption that ensures your organisation, and all the people within it, have a seamless experience from day one. Our network specialists are here to:

Assess your current network

We'll work with you to understand how things are done now, asking why and uncovering pinch points that need to be addressed.

Help you optimise your solutions

When the network supporting your solutions is optimised, you'll get more out of the rooms, the software and your people.

Consult on changes

We'll build on existing networks and all your requirements to provide solutions that will improve the operation of your Microsoft Teams Rooms.

Eliminate unnecessary delay

Considered planning means we can deliver every part of your solution in the right way, first time.

SMOOTH ROLL OUT WITH A NETWORK AND TEAMS READINESS PROCESS THAT:

Reduces delay

Optimises collaboration tools

Ensures security
