Azure Hybrid Cloud

Innovate anywhere, across on-premises, multicloud, and edge environments!

Azure Arc offers simplified management, faster app development, consistent Azure services. Easily organize, govern, and secure Windows, Linux, SQL Server, Kubernetes clusters across data centers, the edge, multicloud environments right from Azure.

Azure Stack HCI is a hyperconverged infrastructure host platform integrated with Azure. Run Windows and Linux virtual machines on-premises with existing IT skills and familiar tools. Easily extend your infrastructure with Azure hybrid services for monitoring at scale, backup, and more. You also can manage container workloads by deploying Azure Kubernetes Service on Azure Stack HCI (AKS on HCI).

Azure Stack HCI and Azure Arc provides

+ Low latency

+ Your location - data sovereignty

+ Caters for High IO and specialty compute

+ High-performance platform in a local location

+ Ability to automate using Azure toolsets

+ Tight integration to Azure services

+ One toolset for on-premises and cloud VM's

+ Support for VM's and Containers on one platform

Services provided by our professional team

1-Day Workshop

Learn about;
- Azure Stack HCI fundamentals.
- Integration with Azure Arc
    - Azure Arc enabled servers, Kubernetes, data services
    - Azure Kubernetes Service (AKS) on Azure Stack HCI
- Azure Stack HCI validated hardware from OEM partners.
- Azure Cost and licensing requirements.
- Use case scenarios

1-Day Azure Arc PoC

- Enable Azure Arc resources
- Management for Deployment
- Multi OS management
- Patch management
- Azure Arc Policies
