

Design to Development Ready: 4-Week Implementation

Week 1

Stakeholder and User Interviews

Our user studies form the basis of your product requirements and yield valuable insights into the use and context of your software.

Week 2

Screen UI Designs

We translate requirements into screen designs and add spec notes to aid in creating the project backlog.

Week 3

Azure Infrastructure

We find the right Azure ecosystem components and technologies to match your unique needs. Then setup and install are deployed as a turn-key solution so your dev team can focus on writing code.

Week 4

Backlog and Roadmap

Our dev-ready backlog items are complete with story point estimates and sprint assignments.
