GO2AZURE MIGRATION

GO2Azure Migration: What is it?

Azure is Microsoft's public cloud platform. You can run your applications on the Azure platform instead of investing in on-premise infrastructure such as servers and storage. In addition, you can take advantage of many of the applications that are provided as services on the Azure platform by providers. For example, Telekom provides blockchain as a service on the Azure platform.

Challenges:

- The applications that were written for on-premise infrastructure may not run on Azure.
- The network may need to be re-designed and capacity may need to increase, as many users will access the Cloud through the connection between yours offices and Azure.
- Some applications and business processes may not work well with the higher latency, e.g. applications such as large scale video editing used in the media industry, etc.
- You have recently invested in upgrading your hardware.
- Security architecture may undergo change.
- Connectivity between the applications needs to be re-wired once the applications move to the Cloud.

Benefits:

- Higher agility
- Fast scalability in response to an enterprise's requirements.
- Faster time-to-market
- Improved security
- Minimizing your CAPEX,
- Reduced and optimized infrastucture costs

GO2Azure Migration APPROACH

GO2Azure Migration Services help you migrate the applications and provisioning infrastructure seamlessly and also monitor and manage your Cloud investment in the most efficient way.

Cloud platform build & migration

- Design, construct & implement
- Re-host, re-factor, re-platform, re-architect
- Pilot migrations with pre-migration testing

Multi-Cloud governance & operations

- Establish Cloud governance charter
- 24*7 monitoring & administration
- Cloud management services

GO2Azure Migration Approach

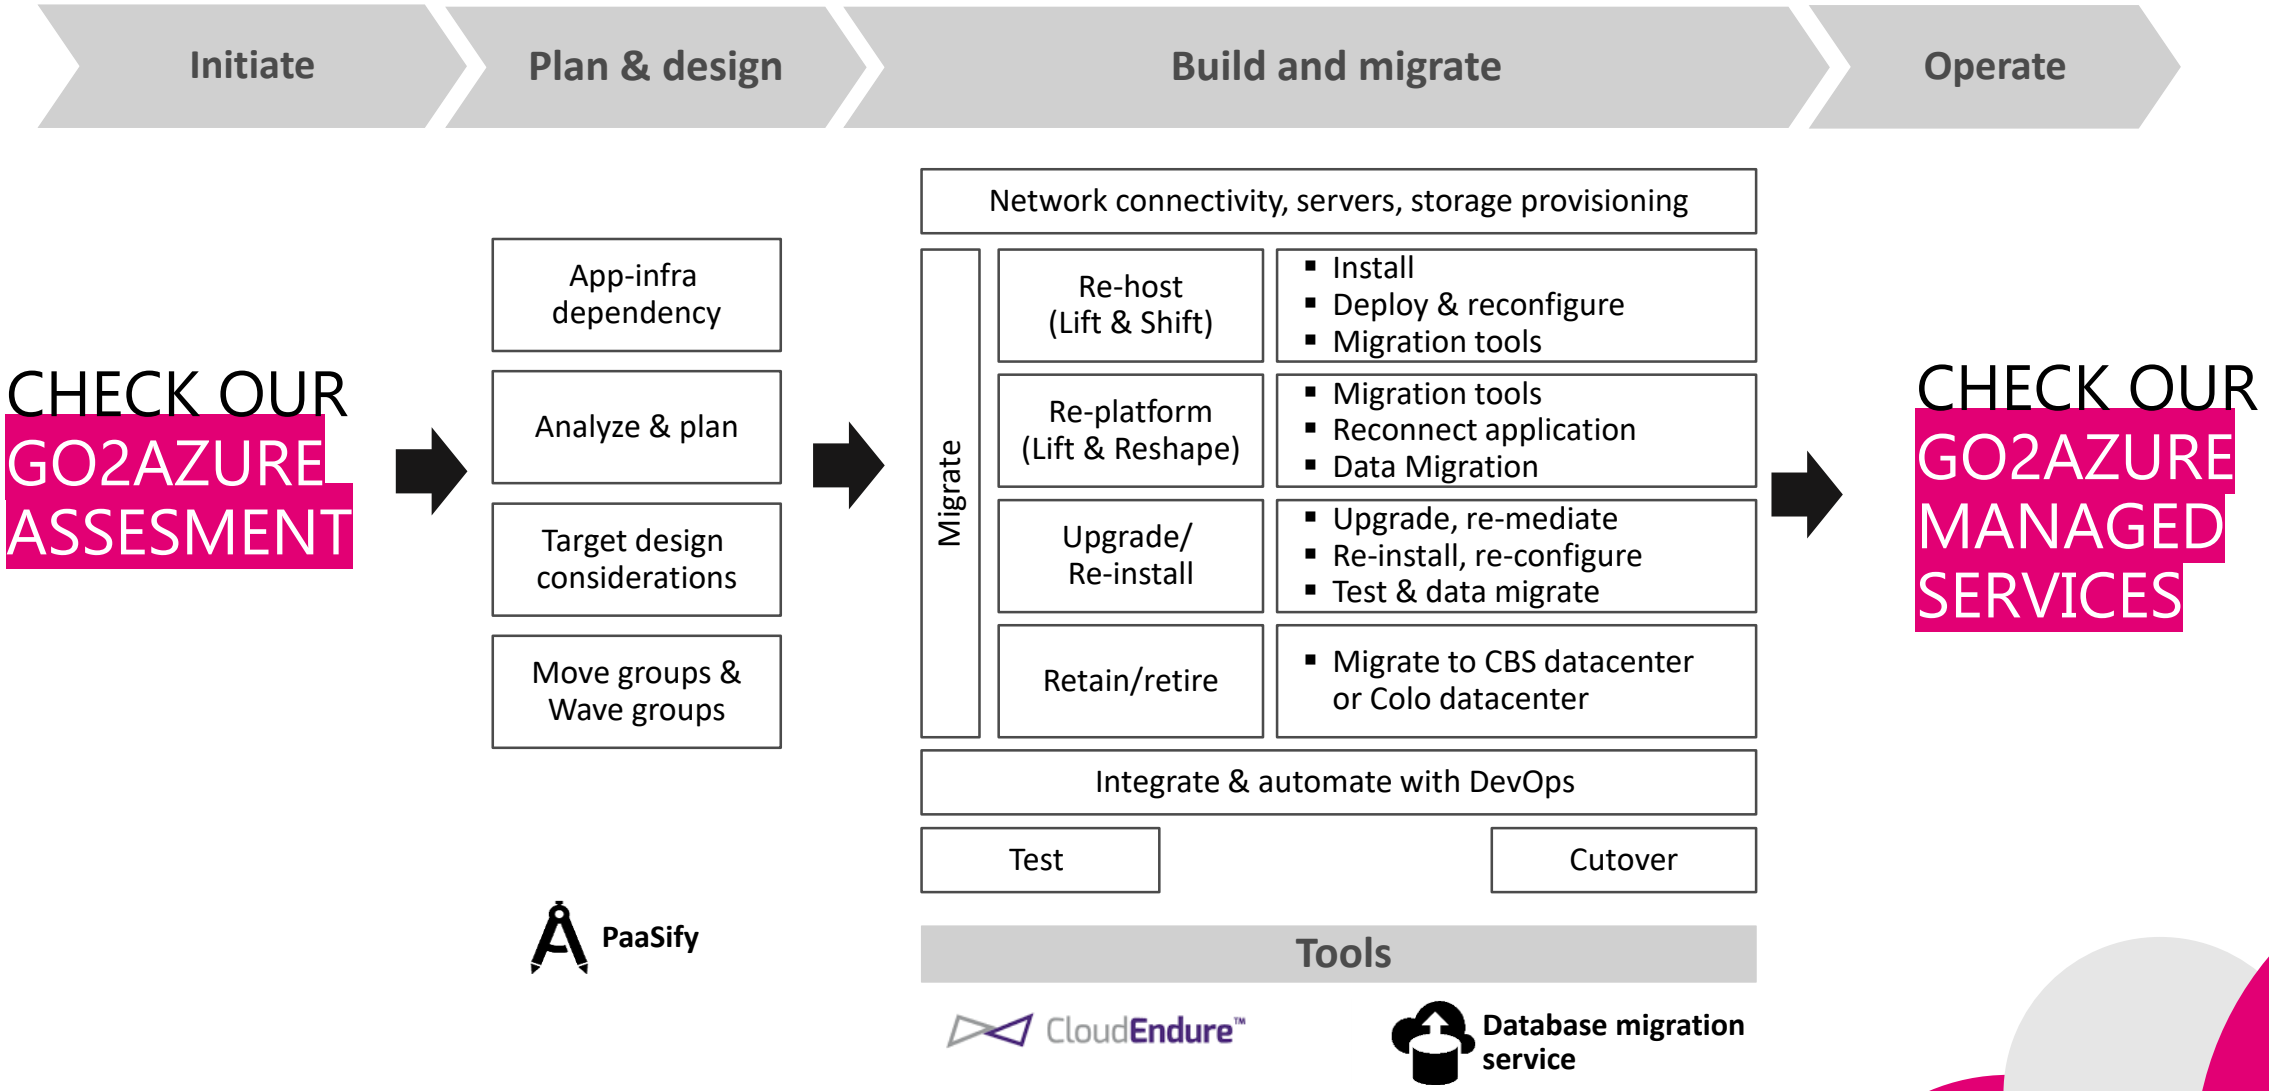
We ASSIST clients with their set-up on public, private or hybrid Cloud and to migrate from on-premises to the selected Cloud platform.

Plan & design	Template finalization for application, infra and Azure	High-level architecture design	Migration strategy, risk & mitigation and deployment plan	Target environment readiness review	Prepare communication plan	Prepare rollback plan
Execute & migrate	Build Azure infrastructure	Connectivity between on-premise & Cloud	Implement Azure components/services	 Migrate identified workloads to Azure	Test migrated workloads	Fix and remediate migration issues

Mode of engagement

- We conduct these services as a project, taking **end-to-end responsibility**.
- We **augment** the client's team as Tech Experts.
- We carry out specific **advisory** projects (e.g. develop the Cloud strategy and multi-Cloud optimization services)

GO2Azure Migration FRAMEWORK



DEEP EXPERTISE IN CLOUD MIGRATION

50+	12,000+	8,500+	500+	100+
Cloud engagements	server assessments for cloud migration	servers migrated to Cloud	certified associates	Cloud native development

Suite of Services

Multi-Cloud strategy & roadmap	Cloud platform build & migration	Multi-Cloud optimization services	Cloud enablement services	Multi-Cloud governance & operations
▪ Discovery & assessment ▪ Business case & TCO Analysis ▪ Architecture strategy & roadmap	▪ Design, construct & implement ▪ Re-host, re-factor, re-platform, re-architect ▪ Pilot migrations with pre-migration testing	▪ Analysis of current inventory & current utilization ▪ Automate cost and security compliance policies ▪ Implement recommendation & cloud savings assessments	▪ Microsoft, SAP, Oracle on Cloud ▪ Database on Cloud/PaaS ▪ Backup, DR, VDI on Cloud ▪ DevOps	▪ Establish Cloud governance charter ▪ 24*7 monitoring & administration ▪ Cloud management services ▪ Cloud command center

Key Differentiators

Microsoft Azure

Corporate relationships/ synergy

Proven digital transformation experience

Experience of handling large and complex programs

Extreme automation through tools and accelerators

One-stop shop for all Azure needs

Cross-industry expertise
