SaaSify your products: 1-Week Assessment

Modernize your products from traditional licensing and delivery models to Software-as-a-Service (SaaS) delivery mode with Nous – a global leader in product engineering, with over 1000 product releases delivered globally. We have been helping ISVs successfully modernize to SaaS on Azure using APPA™ - a Microsoft-audited modernization framework built on Microsoft Cloud Adoption Framework for Azure.

To help with successful SaaSification, we recommend a short 1-week assessment of your product(s) portfolio.

SaaS Maturity Model

Hybrid
Combined on-premises / cloud model for legacy apps

→

Single-Tenancy
Dedicated instances for each customer

→

Minimal Multi-Tenancy
Multi-tenant with limited scalability and configurability
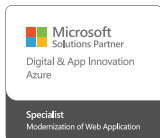

→

Matured Multi-Tenancy
Unlimited scalability at all layers

Activities

- Analyze cloud multi-tenancy implementation model fit
- Current deployment architecture
- Existing licensing model
- Workload compatibility to Azure PaaS services, including Azure Functions, Kubernetes
- High-level target architecture
- TCO analysis

Deliverables

- An assessment report clearly articulating the value proposition of a SaaS model along with associated pros and cons
- Roadmap for overall SaaSification with projected TCO
