'**Cloud First**' strategy is set. How to get started?

Organizations transform their IT to increase both agility and efficiency.

This transformation starts with the setup of a landing zone in a public cloud environment. Challenges usually arise when on-premises applications need to be migrated and modernized to leverage cloud benefits.

Challenges

- Rental contract for datacenter facilities expires
- Lack of transparency and security standards in on-premises server landscape
- Supply risk of hardware adversely affects business growth strategy
- Business requires flexibility and agility in delivering new IT capabilities

Ideal Solution

- Configuration and management effort is minimized
- Time-to-market of new services is reduced
- IT is regarded as trusted advisor of the business on the cloud adoption journey
- Cloud setup is cost-optimized and internal cost allocation is defined

Desired Outcomes

- Landing Zone is created including security, networking, account and resource structure
- Migration and Modernization Scope is agreed
- Cloud Operating Model is up and running
- Plan for building up to-be capabilities for daily Cloud Operations is in place

Campana & Schott.
Datacenter to Azure Implementation.

Our mission is to move your datacenter into a cloud scenario that suits your company – starting from scratch and committed to your individual situation: step by step, **application by application**. We discover **quick wins** by using our validated discovery templates. To modernize your IT, we identify application candidates for refactoring and a switch to cloud-native architectures.

Start with the Basics

- Microsoft Azure offers a vast portfolio of services – we guide you along the key design decisions and get started
- Deploy a baseline configuration for your new cloud infrastructure, containing security, network and account structures

Don't be overwhelmed

- Start with pilot migrations to convince stakeholders and validate processes
- Accelerate the transformation of legacy software by taking extensive care of business users

Be Ready for the Future

- It is a journey, not a single project: Datacenter to Azure Implementation
- Our consulting approach considers your long-term objectives: Attractive cloud service portfolio for your business, efficient deployment processes and skilled cloud service teams
- We enable your team to successfully manage day-to-day operations in the cloud

Strong partnership. Datacenter to Azure Implementation.

Microsoft's long-standing partnership with Campana & Schott has proven as key success factor in many projects before. We combine Microsoft's Azure service offerings with our technical and organizational experience to build up a ready-to-use Cloud Platform and fill it with workloads.

Microsoft Holistic Business Case & Qualitative Assessment
- We help you evaluate the financial impact of the cloud journey
- Quantitative and qualitative decision criteria for cloud migration are considered

Microsoft Azure + Migration Execution
- Together with your team, we implement landing zones, policies and resource hierarchies as a solid baseline configuration.
- Migration of workloads is planned, and project is steered.

CS Project Management + Microsoft Azure
- Microsoft's templates and frameworks for the cloud adoption journey are enhanced by the CS standards for Project and Change Management
- Our long-standing experience in IT Transformation leads your project to success

Customer success:
Enrich your IT Infrastructure with Microsoft Azure

As a global player in the energy business, our customer was facing the challenge of an expiring datacenter contract as well as lack of transparency on IT applications. CS and Microsoft completed an application assessment which served as basis for the cloud migration decision of on-premises applications.

Assessment of IT Landscape

- **Consolidated** information about current server and application landscape
- **Defined** sizing in public cloud hosting
- **Validated** migration approach with IT and Business stakeholder

Server migration

- Set up integrated project team **together with customer's Operations Teams**
- Identified and Migrated **Quick Win Workloads** to get into working mode
- Defined **suitable migration approach** for each application
- Integrated **lessons learned** in further migration project planning

Skilled cloud workforce

- Training the internal IT in essential skills, terms and techniques of the Azure platform to exploit the platform's potential
- For complex applications with many dependencies to each other, supporting the modernization of application architecture
