

# Global Biothreat Intelligence

BlueDot combines cutting-edge artificial intelligence and machine learning with in-house expertise to help you identify, understand, and respond to global biothreats faster and more efficiently.

## Be Prepared

Inform your planning. Understand the current and historic global biothreat landscape for research, planning, and more.

## Know First

Never be surprised again. Get early detection of emerging and shifting biothreats to protect your citizens, operations, and supply chains.

## Focus on What Matters

Let us triage so you can focus. Gain the context required to make time-sensitive, high stakes decisions with confidence.

## Act Swiftly and Confidently

Underreacting or overreacting is costly. Optimize resource allocation by backing your decisions with world-class intelligence.

## Our Intelligence

Detailed global and local infectious disease activity

Disease importation and exportation likelihood in areas of interest

Active disease risk, severity, preventability and government preparedness

New, notable, and unusual infectious disease activity

# BlueDot's Packages

Alerts	Standard Intelligence	Enhanced Intelligence	Comprehensive Intelligence
Situational awareness of biothreats	Location-specific assessment of existing and emerging disease activity	Underlying drivers of risk and impact assessments to enable enhanced analysis	Forecasts, estimates, and interpolations to go beyond reported data
"Tell me what is happening"	"Tell me what the risk level is"	"Enable me to do my own analysis"	"Help me overcome data limitations"

## Why BlueDot?

Singular focus on disease threats

Proprietary analytics

Integrated private and public data sources

Enablement services

Subject matter expertise

Contextual insights

Global coverage across 65 languages

Get the answers you need to make time-sensitive decisions with confidence against global biothreats.
