Bring data governance to life with Microsoft Purview

Microsoft Purview POC with Coeo

Do you know how much data you have and where it is stored? Do you struggle to classify data? Can your users easily search and find the data they need?

If the answer to these questions is no, then Coeo are here to help you kickstart your data governance journey with a Microsoft Purview Proof of Concept (POC).

We are a specialist Microsoft Data & AI partner who see data governance as the building block to great data strategy, data management and data protection.

What we offer

Understanding the tools available to you is key to realising the true benefit of a data governance framework.

Whether you want to lock down sensitive data for compliance or create a data catalog to discover data with familiar and searchable terms we are here to help.

The Microsoft Purview POC will help you workshop all your data governance ambitions and prioritise one business use case to produce a high-level architecture design. The Coeo team will configure and deploy the Azure resources required to start testing Purview features and functionality.

This POC is a collaborative engagement where you will learn about the capability of Microsoft Purview and how to deploy the tool to best practice industry standards, aligned to the Cloud Adoption Framework with first native Cloud Data Management Capabilities certification.

This engagement includes:

- Requirements workshop with an expert consultant
- One prioritised governance use case with up to two data sources
- High-level architecture design
- Azure resource deployment and Purview configuration
- POC Review document
- Data Culture adoption workshop

Choose Microsoft Azure

Be future-ready

Continuous innovation from Microsoft supports your development today, and your product visions for tomorrow. With 1,000+ new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep you ahead of the curve.

Our enterprise grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data-science tools.

Operate hybrid seamlessly

On-premises, in the cloud, and at the edge—we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.

Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

Build on your terms

You have choices. With a commitment to open source and support for all languages and frameworks, build and deploy in a way that works for you. Take advantage of the full-featured, integrated development environments with built-in support Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

We embrace open source, drive innovation through collaboration, and contribute back to the community.

Trust your cloud

Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

With a \$1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.
