

# IBM Power (IBM i and AIX) Skytap on Azure Implementation

How do you effectively migrate your IBM Power workloads (IBM i and AIX) to Skytap on Azure?

Running your IBM Power workloads on Skytap in Azure offers many benefits including improved performance, scalability, cost savings, along with robust data backup and security. Organizations around the world want to move to the cloud but they view the migration as a technical endeavor and struggle to develop a successful migration plan. Meridian's migration service is developed around proven methodologies and 30+ years of IBM System expertise.

## IBM Power Workload (IBM i and AIX) Azure Implementation

The migration service includes determining the right configuration of Skytap on Azure, project management, configuration of the instances in Azure, OS upgrades if needed, and of course, migration of the workloads.

Meridian's expert engineers will identify your cloud environment requirements and determine options including proper configuration of the Azure instance. The migration options are reviewed with you and refined as needed to identify the best approach.

Your Meridian project manager will develop a formal project plan that meets your business and technical requirements. Your project manager will coordinate the necessary resources to execute the migration and oversees project success.

### Outcomes:

- ✓ Understanding of the cloud migration readiness of your IBM Power workloads (IBM i and AIX)
- ✓ Understanding options available for migration
- ✓ A formal migration project plan
- ✓ Project management and professional services to execute the migration
- ✓ IBM Power workloads (IBM i and AIX) successfully residing in Skytap on Azure
