Cloud Transformation Plan

Creating a cohesive plan to accelerate our clients' Cloud Transformation

Businesses should be addressing the cloud architecture design from the perspective of the application.

Taking a 'top-down' application led review, NTT helps with creating a roadmap to move applications into the public cloud with an end-to-end transformation strategy based on business and technical criteria.

Therefore, when a client doesn't have enough visibility of their applications to understand how to move them, NTT offers an application discovery workshop or deep-dive sprints within this Cloud Transformation Plan engagement.

The service is delivered by a group of qualified consultants, supported by our global Cloud Transformation Practice to ensure consistent quality, approach & knowledge sharing around the globe.

Outcome	Benefits
Analysis from the application perspective	Identifying optimum strategies for migrating to public cloud
Gain insights into your target cloud deployments and architectures	Effectively build the business case and transformation plan based on optimizing effectively for public cloud
Decide how to optimize applications before migrating to the public cloud	Take advantage of public cloud features such as Auto-Scaling, PaaS, Serverless and many other 'as a service' features.
Encourages best practice adoption by taking a cloud-native approach	Realise the benefits of the public cloud including faster innovation, agility, and cost efficiency.

NTT's has a proven framework which all services follow to provide a standardized approach.

How do we deliver?

Introduction & Kick-off

Review the engagement, stakeholders, planning, outcomes, preliminary information needed to prepare the first batch of workshops and next steps

Cloud Foundations

Review the current IT footprint: governance foundations, networking strategy, security and compliance requirements and operational model.

Application Assessments

On a per application basis: Review application and propose a best fit for the cloud, identify application evolution based on the 6R's model, iterate on all applications under scope in several sprints

Generate Transformation Plan

After all application assessments are clear, propose the full transformation plan together with all relevant recommendations around governance, operations and SDLC.

What's in the service?

If the client has a few applications, a high-level discovery planning sprint may run first to make initial choices about the logical groups and order in which deeper transformation planning sprints are run.

- Application Assessment (per application)
- Analysis of application as-is to gain an understanding of the business context and criticality technical architecture, infrastructure, dependencies, environments and software lifecycle.
- Understanding of in flight and future business and technical projects
- Considerations made to the migration approach and options based on the 6R's methodology.
- A target design state will be reviewed for each application with considerations made to defining repeatable patterns where possible
- A cloud transformation is developed over time, organizing the application migrations into waves based on a number of factors including related dependencies and business operational risks and impacts.

Why NTT Ltd.?

Disciplined, proven pragmatic approach
Standards for both onetime cloud migrations and large-scale multiphase transformations.

Full lifecycle service
Convert goals into outcomes thanks to a full ICT stack from data center and network to cloud and applications.

Global reach and local delivery
Same delivery and methodology across regions to provide a truly global service.

Extensive track record
Real-world experience delivering successful business transformation projects.

Gold
Microsoft Partner
Azure Expert MSP

NTT holds the top level of Managed Cloud partnership with Microsoft, as well as world class, Global Data Center, Network & Managed Services capabilities. We also hold the highest accreditations in security & compliance.
