Create Your Own Category Structure

360 — View 360 Degree Videos

Planet eStream provides a secure central media platform that includes key tools for educators to create and share learning resources...

Editing Tools to Create Streamlined Resources

Create chapters, add notes or use the built-in video editor to cut together clips from multiple videos.

Interactive Video and Quiz Tools

Easily add questions, hot spots, annotations and links to additional assets. You can also analyse the results and track students' viewing patterns and progress.

Record from a Camera or Capture Your Screen

Record your desktop and/or camera to create recordings – great for classroom capture and providing video-based feedback or guided learning.

Simple Share Options

Built-in share links and embed codes enable easy distribution of recordings and resources.

Integrations with Learning Platforms

Plugins provide a simple workflow for embedding Planet eStream resources into your chosen VLE.

Planet eStream provides the tools that make live streaming and recording a simple, flexible and secure technology for educational organisations...

No Limit to the Number of Rooms

No per room cost provides flexibility for those looking to scale out their capture provision, as there are no hidden licence costs to consider when rolling out room capture across their whole organisation.

Low-Cost Hardware Support

Planet eStream supports low-cost and discreet IP based video capture devices that work autonomously, removing any requirement for educators to set-up hardware or configure recordings.

Built-In Chat for Remote Viewers

A simple mechanism for viewers to ask questions; providing a seamless hybrid learning model and participation opportunities for students working remotely.

Multiple Sources

Capture from up to three video and audio sources simultaneously, including cameras, microphones, whiteboards and projectors.

Microsoft Office 365 Calendar Support

Integrate your room capture schedule with Microsoft Office 365 and automatically publish scheduled recordings to your organisation's calendar.

Planet eStream delivers a true digital signage experience and is a perfect fit for an educational environment, featuring...

Unlimited Screen Licence

The Planet eStream licensing model is not based on the number of displays you are running; it is completely unlimited! Offering a flexible and cost-effective model for organisations to expand their digital signage provision.

Advanced Scheduling

Plan ahead by creating either ad-hoc or recurring schedules. There is no limitation on how far in the future you can schedule content, enabling IT and marketing departments to deploy their signage content well in advance.

Advanced Content Management

Advanced, centralised digital asset management system enabling users to create, edit and organise digital signage assets centrally.

Structured User Access

Granular permissions enable you to control the level of access that different users have to the platform, including specific screens, sections of screens, messages and schedules.

Photo Module

Planet eStream offers a complete digital asset management solution for your organisation. With advanced photo management tools, it is perfect for securely storing, managing and sharing your digital images from one central platform.

Click to Continue

Planet eStream provides a simple and flexible workflow for archiving, editing and distributing images. This enables educational organisations to create a secure, organised photo library that assists with GDPR compliance.

Galleries

Choose from different display methods for your photos, including swipe, scattered and slideshow options.

Import Tool

An automated batch importer for your existing photo archive. During import, tags will be generated based on the imported folder structure, providing continuity for users.

Simple Upload for Users

Users can add new images easily via the simple drag-and-drop interface. When uploading, users can choose to create a new Collection or add new images to pre-existing Collections.

Embedding and Direct Integrations

Share and embed Galleries into websites and other platforms using built-in share links, embed codes and bespoke plugins.

Crop and Rotate
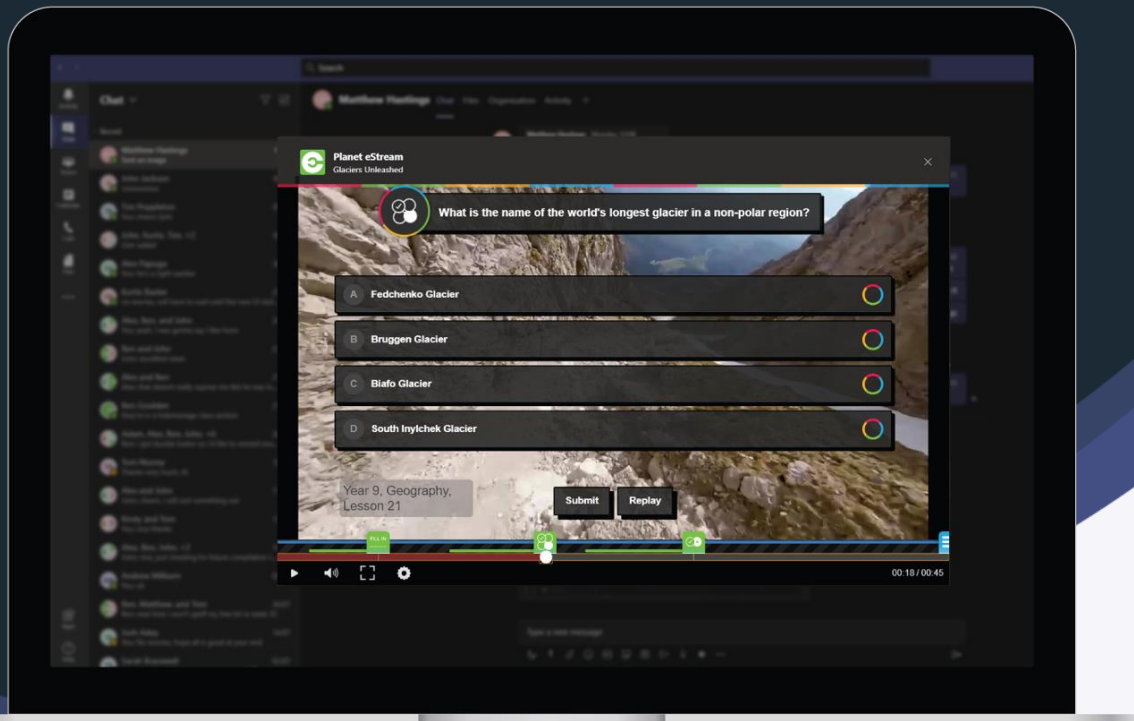

Built-in automatic image rotation and manual tools enabling users to manually crop and rotate images.
