Stuck in the middle

Vast majority of organizations stop evolving after laying their DevOps foundations. The trend of stagnation has been consistent over the last few years.

Build a roadmap to better software

Actionable insights

Convert metrics into actions

Cloud capabilities

Leverage the benefits of cloud

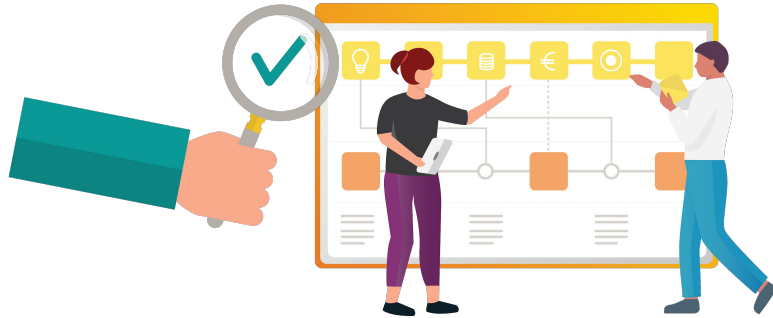

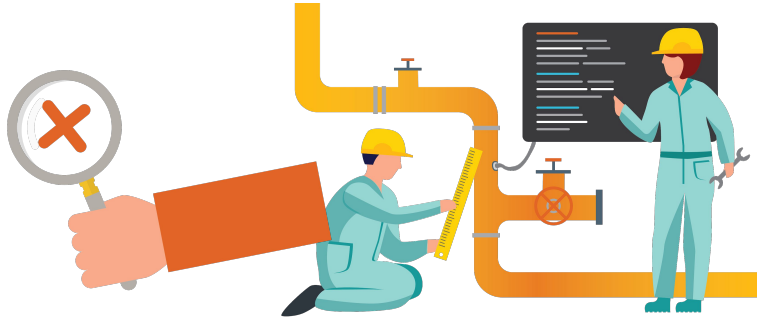

Continuous Delivery

Go beyond automation

Continuous QA

Build quality into your software

From Good to Elite means development and releasing should be effortless – enabling focus to the valuable core activities, less on environments and pipeline maintenance.

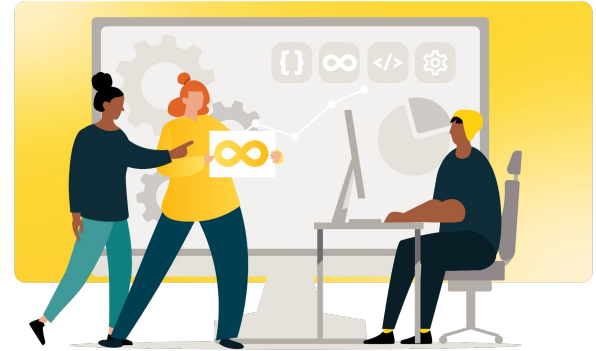

Improved team performance and delivery capability with transparent, traceable release processes and change management.

Project Characteristics

As the area of Continuous Integration and Delivery is vast and requires special skills in many areas, the Eficode way of running CI/CD improvement projects is based on *flexible talent*.

This means, that *we define together examples of the personas which need to be covered in the project*. Eficode will then fill those needs in a dynamic way. One person can cover several skill areas, or two people can work on the area of a described persona.

Customer is paying for the best possible knowledge and expertise for the tasks at hand, while Eficode is responsible for overall quality of the deliverables defined for them.

Smooth Migration to Github

Offer

eficode

Offer in brief

Eficode offers key talent as consultants for assessing & migrating the current release processes.

The work consists of identifying the build pipeline- and delivery pain points by Eficode Devops Toolset Analysis, creating a basis for the common migration strategy.

Migration strategy is carried out as per final agreement with the customer. During and after, training as well as coaching services are also available as per agreed scope.

Deliverables

Eficode DevOps Toolset Analysis is a proven method to evaluate the capabilities and level of support that the current tools provide for customer software development.

- We analyse the current state from tooling perspective
- Set the target state for the new toolchain
- Create roadmap with practical actions
- Migrate as per agreed scope
- Train and coach where needed

Pricing

Work will be invoiced based on actuals (prices excl. VAT).

Schedule

1-6+ months of calendar time

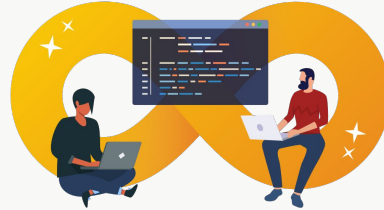

Team Personas for Continuous Delivery Consultancy

eficode

Change Lead & Project Responsible

Defines the initiative, identifies stakeholders, estimates effort and cost. Keeps track of progress. Acts as a key contact between vendor and customer.

Continuous Integration & Delivery (CI/CD) Specialist

Dives deep into customer delivery process. Creates plans for improvement and makes sure developers are heard. Enables change in systems & organization.

Quality Assurance Specialist

Connects end-user experience and overall quality aspect to delivery pipeline work. Ensures that change is done with the end product as main focus point.

Change Lead / Project Responsible

Overview

Experienced in leading projects and building relationships between customer organizations. Capable of defining cost and effort estimates over longer periods of time. Can find talent needed in the initiative and make sure that the project keeps on track. Present and active in customer steering groups.

Deliverables

- Ensuring a successful project!
- A realistic, reliable long term plan
- Costs, effort and invoicing

Ask about...

- | | |
|--|--|
|  Stakeholders |  Finding talent |
|  Future planning |  Invoices |
|  Cost & effort |  Vendor relationship |

Cost & Allocation

- 20 - 50 % allocation
- Allocation depending on customer project management plans

CI/CD Specialist

Overview

Capable in identifying leading improvement activities in all areas of development, release and delivery. Technical expertise in SW configuration management, developer workbench best practices and build systems automation. Capable also with QA systems.

Deliverables

- Improvement plan with actionable tasks in Github
- Task implementation
- Coaching and training of delivery pipeline usage

Ask about...

-  Source code management
-  Development best practices
-  Build and delivery tools and processes
-  Integrated systems
-  Pipeline automation
-  Change enablement in practice

Cost & Allocation

- 50 - 80 % allocation

Quality Assurance Specialist

Overview

A detail-oriented professional with ability to help customer define and keep to the quality standards of the end-product as well as the delivery process. Able to keep an eye on the end user experience as well.

Deliverables

- Quality standards and implementation plans
- Pipeline automation from testing standpoint
- Metrics and KPIs regarding quality

Ask about...

- | | |
|---|---|
|  Quality best practices |  End product quality |
|  Test management and execution |  Culture of quality |
|  Automated testing in all levels |  Shift-left |

Cost & Allocation

- 50 - 80 % allocation

Outcome with Eficode services and Github

- Get immediate results in build & delivery pipeline improvement
- Get started on the DevOps capability improvement roadmap
- Aim for a clean pipeline and related processes in Github for a cost-efficient agreement of external managed services
- Remove risks related to personification of capabilities in development and delivery processes
