How to fit your systems into a data-landscape to support processes and analysis?

Successful modern enterprises rely on data to support their processes but also want to make decisions based on their data. The right data from the relevant systems joined in a manner that assures high quality has become fundamental. We will work with you to evolve your it-landscape into a supporting, scalable data-landscap.

CHALLENGES

The major challenges our clients mainly deal with revolves about the unknown possibilities for their business and IT. Bad data can halt processes or support wrong decisions .

IDEAL SOLUTION

Our clients aim for a solution that allows them to bring benefits to their business fast and avoids risks. A reliable data landscape assures processes and supports decisions. Being build right, it can include new systems, processes etc. easily.

DESIRED OUTCOMES

A modern data landscape should be supporting the business in the background, making sure that data does not need to be exported and imported manually. Users can access a good quality data to make reliable decisions and analyse data without misunderstandings.

Azure based data landscape

Let us work together to improve your data landscape. Our approach and over twenty years of experience can help you satisfy your customers and your business better than ever before.

1

Assessment

Together we assess your current situation to provide you with a rough estimate and a first draft of how we canimprove your data landscape. This first step comes with no costs.

2

Workshop

In a more comprehensive workshop we work on the details towards improving your data landscape. After this workshop your will get a roadmap and a clear and detailed offer.

3

Azure Integration

We focus the data-landscape around azure to assure scalability and security while also shifting the focus of your IT from maintaining servers and services for the app or software.

ERGON Datenprojekte Data Landscape & Microsoft Azure

Improve your data landscape with ERGON Datenprojekte based on Microsoft Azure. Together we can archive an approach that allows to to iteratively update your existing tool and to provide benefits to your clients and business right from the start!

Security, scalability and seamless integration

Microsoft Azure allows secure, scalable and user-friendly solutions for your customers and business.

Integrated deployment and automated testing

Using Azure Dev Ops we can setup and automate complex deployment processes and stabilize the new solution with automated tests.

Iterative step-by-step cutover to the improved data landscape

With our experience we can use Microsoft Azure to develop in an iterative manner and cut-over quickly ‘module for module’ instead with a big bang after a while.

Customer success: A new Data Landcape!

“ERGON has helped to work out our new data-landscape. We included all relevant systems such as ERP, CRM and our campaning-tool, linked also to Google Ads. We can now focus on analyzing our data and assure that our processes get the right information at the right time.” Martin, CIO Hamburg based e-commerce software company.

Easy setup, no build up time

Using Microsoft Azure made it easy to set up everything for the client. There was no IT Department necessary, as all could be done by us for the client.

Iterative Process

To deliver is our main task. Using Microsoft Azure we were able to deliver in quick iterations so that the client know and to influence what he was getting from the beginning.

Integrated Deployment to provide functionalities to customer quickly

Especially as a startup it is important to provide clients with the functionalites needed to convince. Using Azure we were able to quickly roll out functionalites, as they were needed
