

# MIGRATION SOLUTIONS

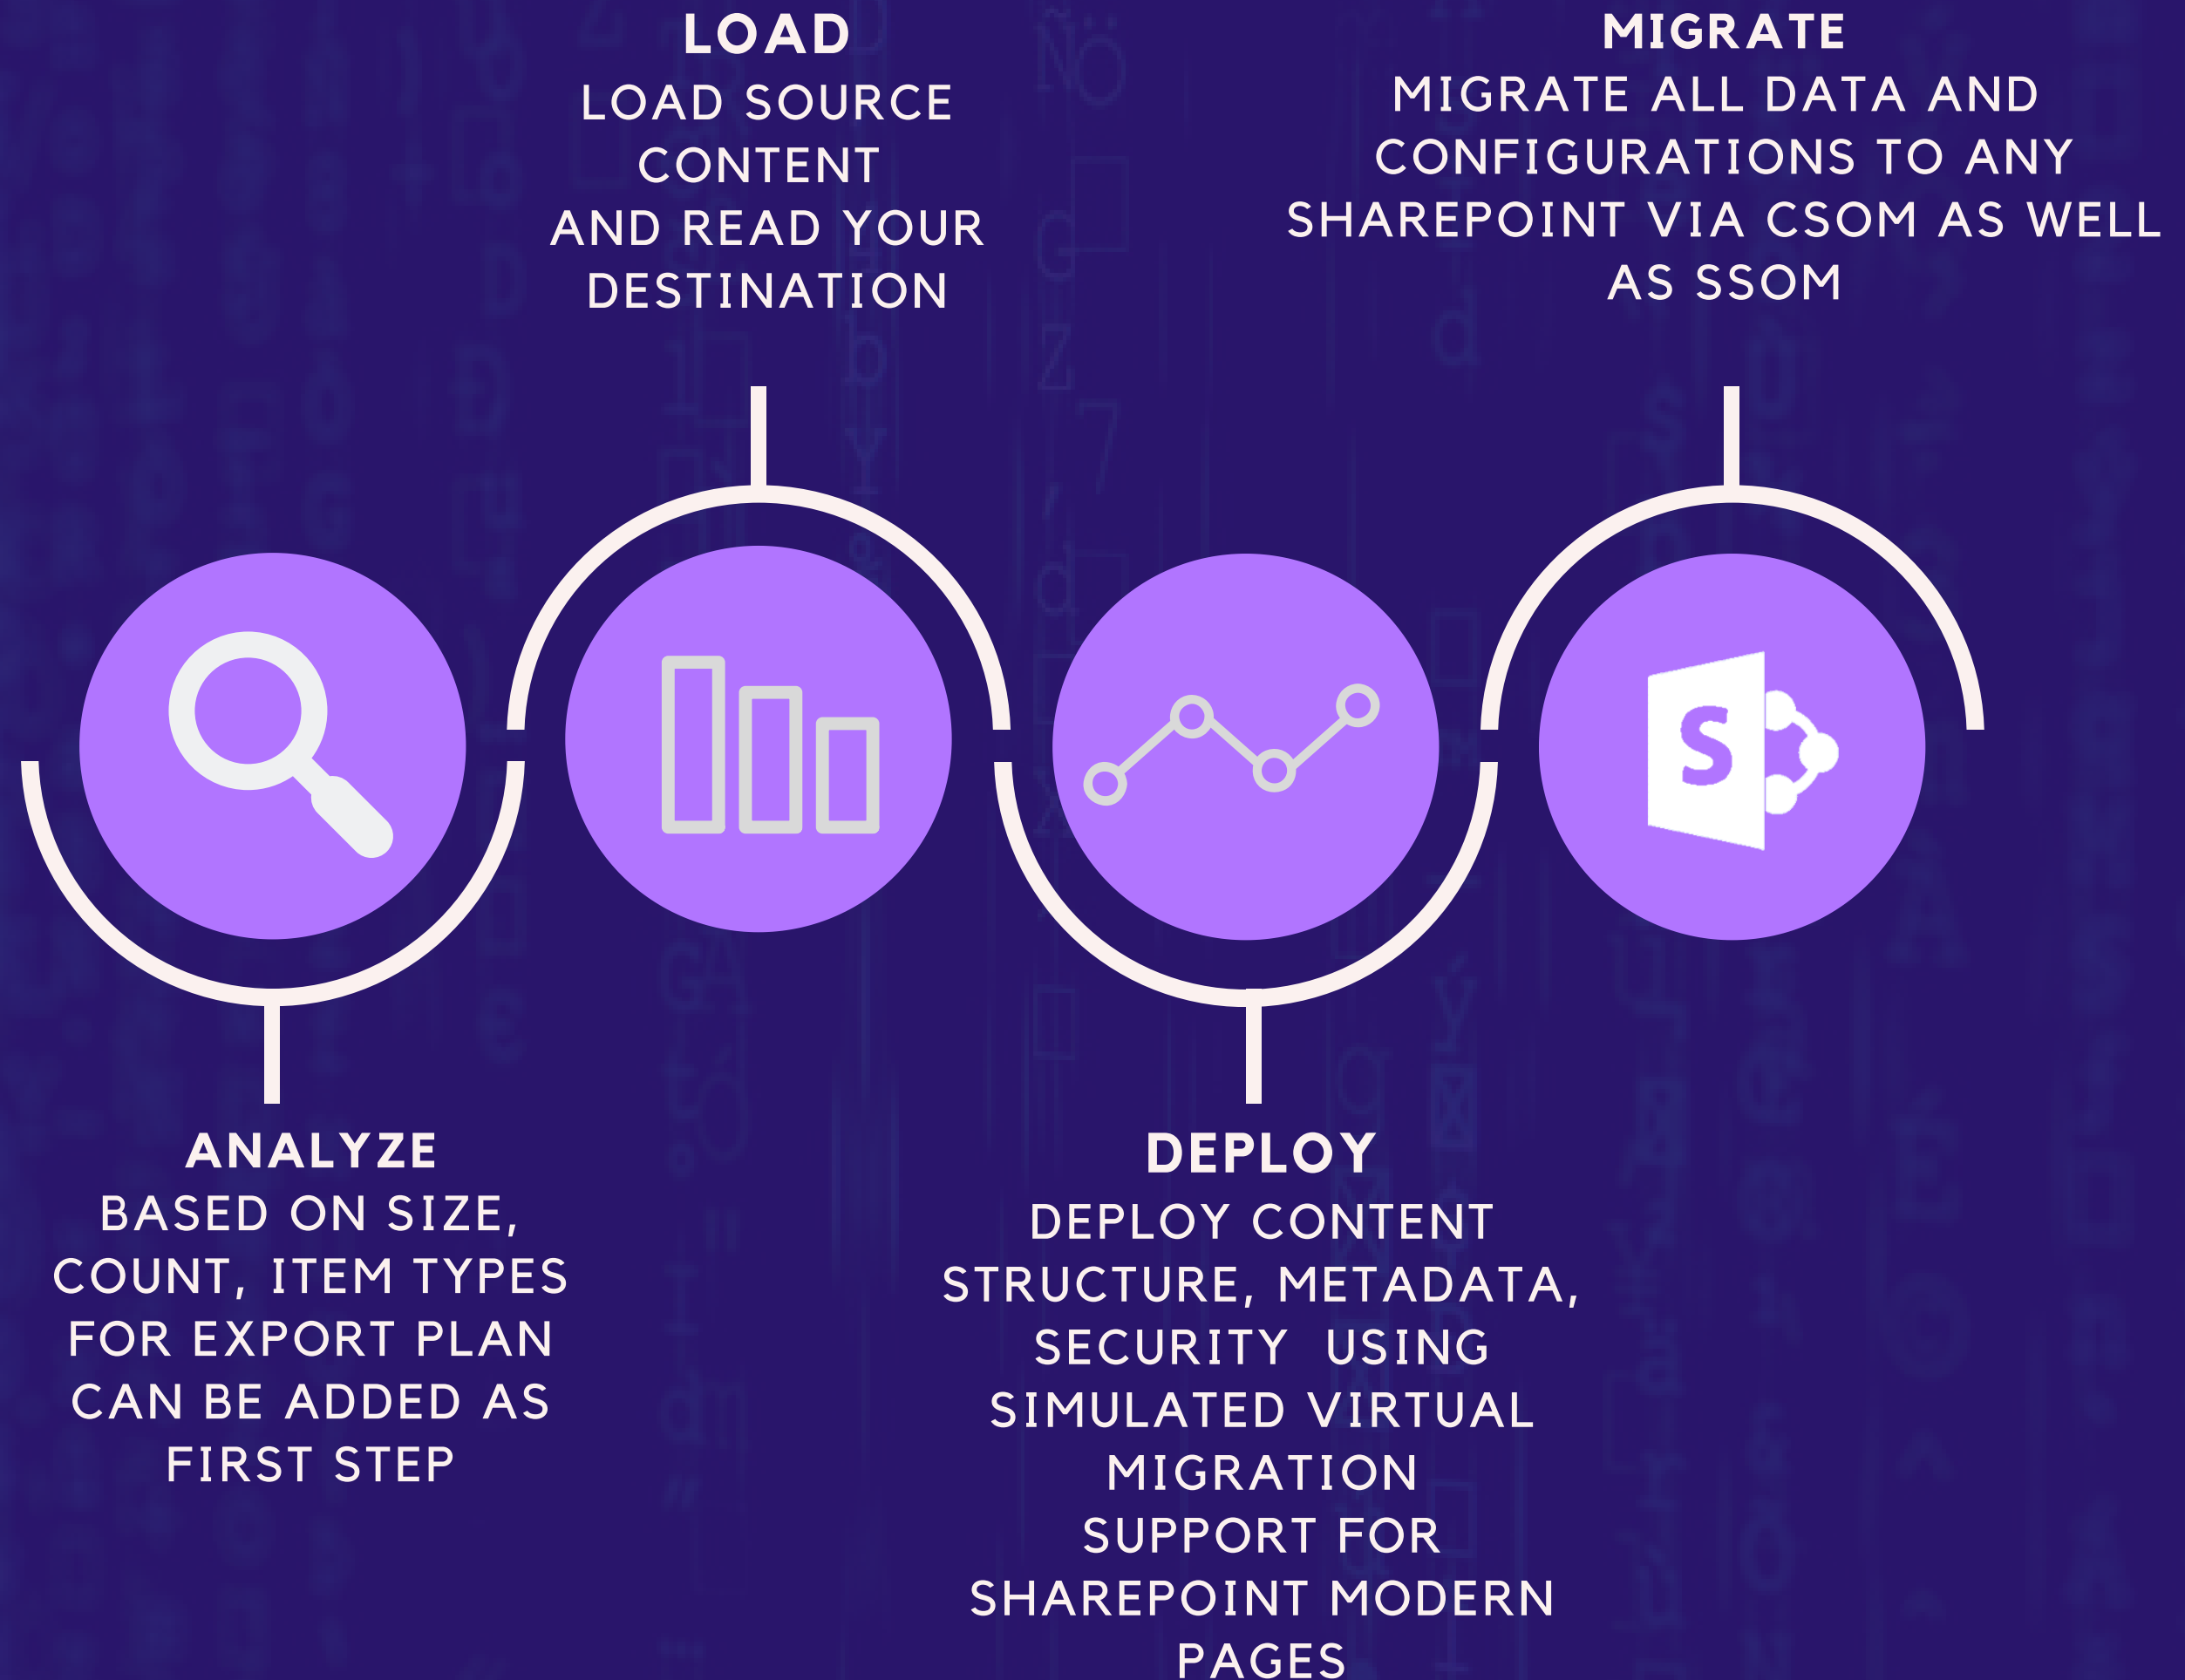

# TZUNAMI DEPLOYER MIGRATION MASTERS

For more than 10 years, Tzunami Inc. has been a leading provider of SharePoint Migration solutions. As a pioneer in the field of content migration, Tzunami has a strong track-record of serving global enterprises. Tzunami Deployer's simple solutions, migrates organization's content to advanced SharePoint systems from multiple sources.

With Clients such as federal government entities, Fortune 500 companies and well-know multi nationals, Tzunami provides simple, fast and cost effective solutions.

# THE MIGRATION PROCESS

## KEY FEATURES

Tsunami Deployer for SharePoint provides an easy-to-use Graphic User Interface (GUI) that is both simple to learn and incredibly powerful. The user interface includes familiar Explorer-like views, drag-and-drop migrations, and wizards for complex processes.

Property and value mappings allow users to manage metadata migration, all the while retaining vital enterprise information.

Security settings are migrated with the content, and can also be managed and modified using Tsunami Deployer for SharePoint.

## DOCUMENTS AND ITEMS

Tsunami Deployer for SharePoint handles all types of items, including the basic data items (contacts, tasks, etc.), documents (including specific versions), folders, lists, as well as sites and site collections. You can create your own custom templates that include all the layouts, themes, and templates in the target SharePoint and use those templates in Tsunami Deployer.

Metadata, security settings and versions are all read, handled and migrated by Tsunami Deployer for Sharepoint.

# STRUCTURE

Whether the requirements are to retain the current structure during the migration, or completely remodel, Tsunami Deployer for SharePoint allows users to sort, customize, design and redefine the structure of the migrated content.

Sites, lists and folders can all be relocated, restructured or even redefined as different structures. Sites can be migrated to different site collections and lists can be migrated as folders or vice versa, as well as a number of other combinations.

For a comprehensive upgrade to e.g. SharePoint 2013 or SharePoint 2016, Tsunami Deployer takes advantage of site templates (both global and template galleries) as well as list templates. This provides users with total flexibility in designing the look-and-feel the new SharePoint environment.

# MODELING SHAREPOINT TARGETS

Tsunami Deployer enables you to model your target SharePoint, into which the source content will eventually be migrated. You can model:

**Structure** — Create or modify site collections, sites, portal areas (SPS2003 only), libraries, lists and folders.

**Metadata** — Design the property sets and properties that comprise the columns of the target SharePoint lists.

**Security and Permissions** — Create or modify groups and permissions levels, add users and assign permissions.

# METADATA MIGRATION

Tsunami Deployer retains version history for items and documents with all relevant metadata. With a user-friendly Property Mapping panel, Tsunami enables swift metadata migration during the upgrade to SharePoint, allowing users to retain all business-critical. Tsunami Deployer for SharePoint easily retains business-critical information, such as when and who created the documents. Additional metadata, both out of the box and customized, can be simply migrated using the property and value mappings.

# SECURITY

Security migration can be performed as part of the content migration, thus retaining users' and groups' permissions. Furthermore, security migration is possible for users from different domains, even between systems that are connected to different LDAP systems. When migrating content into SharePoint, Tsunami Deployer analyzes security permissions in the content sources and allows mapping of source users, roles, and permissions to corresponding SharePoint users, groups, roles and permissions in order to best match the existing settings.

## SHAREPOINT RESTRICTIONS

Tsunami Deployer for SharePoint Migration provides a warning system to the user to handle “weak” restrictions appropriately. These weak restrictions can usually be configured in SharePoint, such as maximum-size file upload or blocked extensions. With stronger restrictions, such as invalid naming and names length, Tsunami Deployer for SharePoint provides an automatic repair, which requires minimum user interaction.

## RULE ENGINE

Using a simple user interface, Tsunami Deployer for SharePoint provides a rule engine, allowing users to control the behavior of the migration. With the ability to verify various conditions, and perform a multitude of actions, sets of rules are easily defined to control and automate the migration process.

This tool supports primarily content migration to all SharePoint requirements.

For details regarding extending the rule engine for additional conditions and actions please contact the Tsunami Support Team at [support@tzunami.com](mailto:support@tzunami.com).

# YOUR MIGRATION IS IN EXCELLENT HANDS:

1

## Migration Masters

More than 10 years of experience with enterprise content migration. Hundreds of satisfied Clients from a wide variety of industries (Aviation, Financial, Government, Pharmaceutical, Healthcare and more).

2

## Rapid Migration

Cost effective solution. Rapid Deployment of SharePoint Structures. Save time and reduce migration costs, SCHEDULING, Offline simulation environment, Incremental Migration. Delta Migration at a press of a button.

3

## Easy To Use

Migrates all List Types, advanced filtering, Drag and Drop Migration. Deployer has been developed specifically to respond to all Advanced SharePoint requirements including Office 365. Detailed Migration Reports.

4

## Advanced Configurations

Security migration, Metadata Migration, Analyzer, Migrate permissions, Content Modeling, Property Mapping, added value feature, Migration API, maintain links, Link resolver, Virtualized SharePoint Migration.

5

## Support 24/7

Support for Modern Pages Support all time zone. Dedicated account manager. Free trial for a flexible period of time. Custom development (according to costumers needs). Maintenance includes new features, versions and bug fixes.

6

## Great Execution

A broad range of technological expertise, supports old versions, help deliver the highest quality solutions, with immediate and long-term benefit to Tzunami's customers and partners.

## GLOBAL MAPPING

Map the entire setting, permissions, groups, properties, metadata, values once before committing into SharePoint. You can save and use the same global setting for your future migration projects.

## FILTERING

The exported source content can be filtered based on any type of the metadata. Export only content that match a certain defined criteria. Content can be filtered during the export process itself based on metadata and desired conditions.

## VERSION MANAGEMENT

Export items versions. Choose the types of item versions to export. Control deployment and migration deciding how you would like to manage version in transit to SharePoint 2019. Support for SharePoint Modern Pages

## SCHEDULING

Run a migration during off-hours, weekend or any other time that fits your needs, you can schedule the migration plan to start when you are ready.

## RULE ENGINE

There are default predefined rulesets that comes with Deployer for the most common Deployment Practices. However, it can be used to customize many aspects of the Deployment Process from Deployment Structure to Mappings.

## OPTIONAL

## URL REDIRECTION

Redirects any requests for an item already transferred to its new location in SharePoint. This will prevent broken links (also within documents) and prevent users from modifying content that was already migrated into SharePoint.

## LINK RESOLVER SERVICE

A component of Tzunami Deployer, which is required to fix links during migration. Fixing the link inside A to point to B. The Tzunami Link Resolver Service runs as a windows service.

## OPTIONAL

## SUPPORT FOR SHAREPOINT MODERN PAGES

With Tzunami Deployer you can easily and securely migrate and convert all your Classic sites to Modern sites from many systems.
