# CLIENT BASED MIGRATION SOFTWARE FOR MIGRATING DOMINO APPLICATIONS TO SHAREPOINT, AZURE AND MORE

## OUR MISSION

We want to provide successful companies with the software and services needed to be successful also in the adoption and full usage of Microsoft 365. We are doing this in the three steps:

- Migration software
- User adoption platform
- Usage analyze tools.

## FEATURES

### MIGRATION

Select databases, forms and fields. Map to SharePoint sites, lists and content types. Migrate with just a few clicks.

### ARCHIVING

Archive databases with content needed for compliance and reference reasons to a read only format of XML. Store in Azure, AWS or any filesystem. Render to readable format with any web server. Or use the included Microsoft Teams App.

### REPORTING

All migrations regardless of type will report with a document by document migration log to make sure everything is over and no one is left behind.
