ENCOMPAAS

Intelligent Information Governance For Business

Understand, manage and protect enterprise content with an intelligent, manage-in-place information governance solution for cloud and on-premises systems.
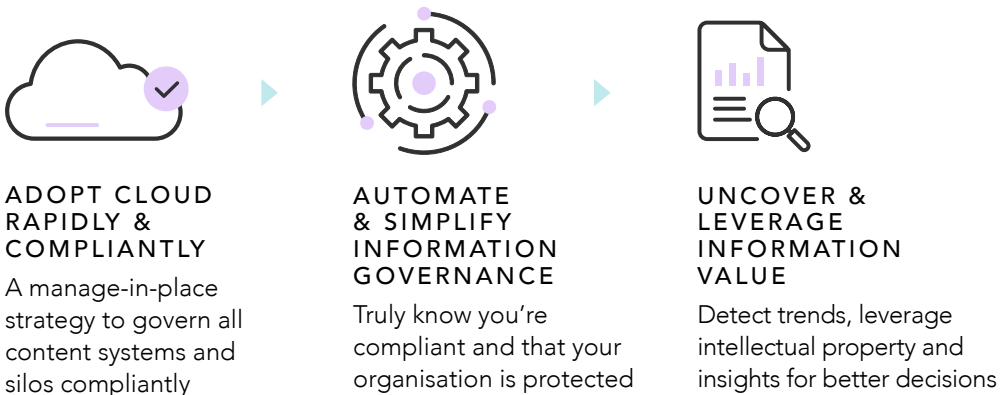

Records and Information Management systems need to evolve

Organisations use a broad range of SaaS, Apps and legacy systems to support daily business activities, with many of these not being compliant.

Traditional records and information management systems are unable to supervise regulatory obligations across repositories, leaving significant gaps in activating enterprise information governance strategy.

- Over 80% of organisational information is unstructured content, growing exponentially.
- Regulation and compliance obligations are increasing, and watchdog activity is up.
- Insights make the difference for leadership teams but are not always accessible.

Records systems need to transform to meet increasingly complex regulatory requirements and deliver value back to the business.

ADOPT CLOUD RAPIDLY & COMPLIANTLY

A manage-in-place strategy to govern all content systems and silos compliantly

AUTOMATE & SIMPLIFY INFORMATION GOVERNANCE

Truly know you're compliant and that your organisation is protected

UNCOVER & LEVERAGE INFORMATION VALUE

Detect trends, leverage intellectual property and insights for better decisions

EncompaaS solves the information governance challenge intelligently

EncompaaS provides a federated approach to supervise and manage content from systems across the enterprise including M365, Teams, SharePoint, Content Manager and Shared Drives. Bridging the gap from on-premises to cloud EncompaaS automates the discovery, classification and management of content. You can leverage Manage-in-Place capabilities where it makes sense to do so or migrate content to nominated repositories to support application retirement and long-term data preservation.

EncompaaS intelligently orchestrates the management of content throughout its lifecycle giving you the flexibility and agility to address evolving information governance and business requirements today and tomorrow.
