

# Azure Stack HCI workshop

The workshop is setup as a 3-hour walkthrough of what Azure Stack HCI is, how it differs from Azure and Azure Stack Hub, how it can be used in your organization, and the pros and cons for choosing this solution over other hyperconverged solutions.

Azure Stack HCI is a hyperconverged infrastructure (HCI) cluster solution that hosts virtualized Windows and Linux workloads and their storage in a hybrid environment that combines on-premises infrastructure with Azure cloud services.

This offer is specifically for organizations CTOs whom are interested in a modern, affordable and hybrid virtualization platform for their VMs and services, and who need to boost their knowledge of how this solution can accelerate productivity and benefit the employees' day to day activities.

## Agenda for the workshop

- What is Azure Stack HCI?
- How and with what does it integrate?
- Licensing an Azure Stack HCI solution

After the workshop is completed, attendees will be able to understand what Azure Stack HCI is, how it can benefit their organization, do's and don'ts as well as how the solution is licensed.
