

**Opeeka's Person-Centered Intelligence Solution (P-CIS) is a cloud-based assessment software that allows behavioral health, social services and human services staff to track client progress over time.**

P-CIS provides visualization of longitudinal changes in well-being as measured through assessment and reassessment. The goal of the software is to facilitate the use of assessment data in the decision-making process of person-centered care. P-CIS is ideal for use across systems of care including social welfare, justice systems, behavioral health and school systems.

## Delivering Return on Assessment

P-CIS is the first platform of its kind to effectively map progress toward well-being for people participating in person-centered care systems in jurisdictions that need help with:

- Data collection
- Transforming assessments into information for treatment planning
- Tracking individual client progress over time
- Evaluating program performance
- Communicating progress to clients/families
- Identifying clients who are thriving and sliding in the program
- Identifying program strengths and needs
- Sharing data with regional and state authorities
- Integrating with existing EHR
- Evaluating program performance
- Reducing the burden of data double entry
- Producing a broad retrospective look at how well the system is performing

A single platform for social service agencies, public officials, community leaders, legal authorities, educators and natural supports.
