

Modernizing Applications

Our Application Modernization offer is designed to identify and modernize applications for our clients, demonstrate value by identifying areas of improvement in DevOps, and enable a pattern for continual improvement as customers migrate to the cloud.

The time to modernize is now

- Accelerate Time to Market for New Features
- Improve DevOps Performance
- Enable Cloud Migration
- Extract Mainframe Value

Cloud, hybrid, or on-prem

We help clients decide which applications make sense to modernize, whether they are located on the cloud, hybrid, or on-prem

Level up your team

We work in tandem with client teams to update their skill sets and prepare them for future modernization initiatives.

Duration: 10 Weeks

Price Estimate: \$225K

Accelerate Your Innovation

We spend time with your team connecting strategy to drive execution and prioritize IT projects with business challenges. We focus on understanding your technology, process, and people while defining core value propositions and uncovering new or existing pilot applications and scenarios. We design a solution based on objectives and key results and then demonstrate and deploy a mutually agreed-upon application. We modernize applications to accelerate your time to market. Our approach will identify opportunities for improvement and help you define a long-term modernization roadmap.

Benefits of Modernizing

Application modernization improves organizational and technological performance, enhances the quality of customer and employee experience, and accelerates time to market for new offerings and updates.
