ATT DIGIVERSE

Intelligent Monitoring Alert System (iMAS)

Cloud-based Intelligent monitoring and alarm management system for remote worksite safety and hazard prevention applications
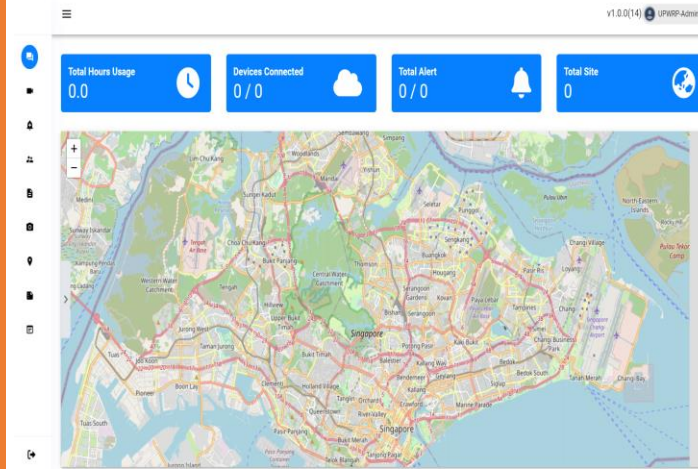

BUSINESS ACHIEVEMENTS

Video surveillance and security cameras are a must when it comes to the overall safety and security of your business and personnel. As technology progresses, enterprise is able to monitor, assist and protect field personnel safety and asset security in real-time and field operation efficiency is enhanced by frontend device features such as real-time evidence collection and site reporting.

KEY FEATURES

Analytical Dashboards

Site Monitoring

Fall Detection

Hazard identification

Geofence Alerts

Report Generation

Device overall status

SOS Distress calls

Video Management

SOLUTION OVERVIEW

iMAS enables both onsite working staff and back-office staff to communicate, monitor, picture and video hazardous working conditions, for safety protection and incident prevention purposes via its module, iVision.

iMAS also allows project teams to dispatch remote works, track worker locations, and detect falls. Analytical dashboard is provided for viewing of videos and images, analyze hazard classification and impact, etc.
