

# YOUR NEW TEAM MATE

## Making Automation Effortless

Are you looking at deploying an automation solution within your organisation? Or do you currently have one and it is taking up too much of your IT teams time to manage?

Intelligent Automation can realise immense benefits to your organisation; increasing efficiency, cutting down costs and improving employee morale. However, similar to most major technological uplifts and changes within an organisation, the implementation and management times create significant additional workload for your technical teams.

Delv's Managed Automated Task Environment (MATE) is a fully managed platform which is highly scalable and can deploy automation rapidly— with minimal effort. MATE will alleviate the time-consuming setup and management tasks from your technical team, ensuring that you get the most out of your automation experience.

The MATE service is suitable for almost any business, with seamless integration into leading automation platforms and the flexibility to be hosted on a local cloud or on your premises. The MATE platform is highly secure, fully wrapped with enterprise and financial grade security posture.

The Delv team will be there to deliver your MATE end-to-end. Establishing the infrastructure, setting up the processes, workshoping with your team and building out your automation pipeline. Our onshore management and support team will be there for you and your new team MATE throughout your journey.

Ready for rapid implementation and hassle-free management of your Intelligent Automation environment?

Get ready to meet your new team MATE!

**DELV**

## THE DIFFERENCE YOUR NEW TEAM MATE MAKES

### Typical Automation Establishment and Maintenance Workload

- TO DO:**
- Development of production environments
  - Installations and updates of the software
  - Multiple servers and infrastructure management
  - Auditing and tracing the complete solution
  - Manage user accounts
  - Management of security
  - The rest of your workload

Establishing and maintaining an Automation environment requires a lot from your tech team, taking up a significant amount of their time.

### With MATE

- TO DO:**
- Manage user accounts
  - The rest of your workload
- 

With the MATE platform, your tech team's time will be freed up, giving them back some time to focus on the rest of their workload.

## KEY FEATURES

### Hosted on an Australian Cloud or in Your Premises

The MATE platform is located in an onshore cloud. However, if you prefer, we can establish the platform on your premises.

### Observability and Monitoring

Automation generates large amounts of auditing and logging information, as well as a lot of business metrics. The MATE platform consolidates all of this information to give enterprises a complete dashboard view of their digital workforce and their environment.

### Single Sign-On

MATE's single sign-on solution eliminates the requirement to continuously input passwords, improving user experience, increasing security and alleviating the need for password resets.

### API Layer

The MATE platform includes a secure and robust set of API's, allowing for simple integration with your existing business platforms.

### Supports Leading Automation Platforms

This service can be used with leading automation platforms, ensuring minimal impact on your environment.

### Source Code

Bot creation generates many assets, including scripts, data files, and configuration. The inclusion of integrated Source Code Management ensures that these will be backed up and tracked for you at all stages of the bot creation lifecycle.

### Managed Service

Delv will deploy, manage and maintain the environment whether hosted on cloud or on-prem.

### On Shore Service Desk

Our Australian based service desk will be there to support you with any issues or questions you may have.
