

SUCCESS STORY

UTILITY REGULATOR, US

**Documentum &
SharePoint 2013**

SharePoint 2019

530 GB

Case Study Overview

Large Utility Regulator based in the US, contacted Tsunami for a migration project of 530 GB. On Premise Documentum 7.2 Server and SharePoint 2013 into SharePoint 2019.

The Utility Regulator migrated Enterprise data (MS Word, MS Excel, MS PowerPoint, PDF, Images, Compressed Zip files, Text files, CSVs, and email files).

The reason of upgrading to SharePoint 2019 was ease of use and benefits of using SharePoint to manage content for thousands of users.

Tsunami collaborated with Reality Tech who were responsible for managing and executing the enterprise migration project.

Millions of documents were migrated successfully into SharePoint 2019.

**JOEL PLAUT
CEO
REALITY TECH, INC.**

“Tsunami is the tool to use for the toughest and most challenging migration projects. It supports the less common sources for migration, and configuring for the most demanding projects. We've delivered successful migration projects with the tool, and we'd gladly use it again for future migration projects.”

Migrating two legacy systems into SharePoint 2019

Tsunami Deployer extracted the content from Documentum along with all necessary business metadata required for the project. After loading the exported content into Deployer, the client deployed the source Documentum & SharePoint 2013 to target SharePoint 2019 sites. Proceed to the Property Mapping Wizard and complete the deployment process. Finally, they received a detailed migration summaries and reports to ensure all content is successfully migrated to the new SharePoint platform.

"We used the extensive logging capabilities, and templating which was useful." Joel Plaut, Reality Tech, Inc. The client use the Tsunami **Link Resolver Service** and saved time and money by relying on Tsunami Deployer's expertise.

As is inevitably the case in every migration, support was required. "The Tsunami support team is in a word excellent, as well as responsive."

“

"We note that Tsunami provided support off-hours, which was of great value to us. We very much enjoy working with Tsunami and enjoy their extensive support for a diverse set of source systems".

The Tsunami Deployer Solution

Tsunami Deployer let you easily and securely transfer your data to any SharePoint from Documentum and more than 20 integrations. The solution allows the user to run the export command on one machine, while loading the data onto another. With the ability to connect remotely to the Server, users can easily chose the content they wish to be migrated.
