

Azure IoT solution for asset management in the Utility segment

beanTech – Smart Utility Platform

beanTech is a specialized system integrator providing IoT solutions for process, performance and energy data analysis.

See what customers are saying:

“With Smart Utility Platform companies can easily manage and monitor in real time device installations from different suppliers distributed in a wide territorial area.”

WHAT WE OFFER

Smart Utility Platform is a PaaS Azure IoT solution with web portal dedicated to the monitoring of field assets.

beanTech provides a software-factory approach to address any required platform customization: e.g., device integration to the platform, customization of integration flows with information systems, daily fleet monitoring, and software support ticket management.

Our solution delivers:

- Scalability through the PaaS formula.
- Device governance through management, processing and analysis of submitted data.
- Integration with enterprise billing components, Web GIS and with management applications.
