Cloud Migration

Customer

FxPro is the world's number 1 FX broker with clients in more than 170 countries.

Challenge

FxPro wanted to migrate their on-premise Data Warehouse to a cloud-based solution.

Our work

We applied our 6-week PoV framework to:

1. Assess their existing data estate, as well as in-house skills.
2. Provide on-site hands-on training in building the Azure data estate. Training covered creation of ETL pipelines using Azure Data Factory along with Azure Data Warehouse (Synapse) best practices and performance tuning.
3. Create custom training manuals that complimented our hands on training.

Impact

- A small but **fully functional Azure based data estate**. Including fully automated **end-to-end ETL pipelines** from data source extractions through to data marts.
- **Trained staff** that could continue to add data sources and create data marts to the Azure Data Warehouse.
- **Training material** to onboard data engineering staff.
