

Dashboard in a Day

What is Power BI?

Power BI is a way to explore data and visualize it. It plays a role in data quality, data manipulation and transformation, and provides a platform for data governance.

What is a Power BI Dashboard in a Day?

The HBS Data Solutions team can conduct a hands-on workshop for a Dashboard in a Day (DIAD). The DIAD will review the capabilities of Power BI and its ability to transform data into valuable visual dashboards and reports. This is an instructor led workshop and it allows the attendees to work through the development on their own with the instructor available to address questions along the way. Each attendee can manage their own pace and work through the development.

Goal of the Project

- Understand how Power BI can easily transform complex data into easily digestible formats for different audiences
- Connect to, import, and transform data from a variety of sources
- Define business rules and KPIs using mock data supplied by Microsoft
- Explore the powerful visualization tools
- Build a stunning report
- Learn how to share your dashboards with others
