

Cloud Migration

Cloud Migration Approach

A Microsoft Cloud Adoption Framework aligned approach

Workshop & Assessment

CAF Workshop & Assessment

Deliverables X S X 至 Strategy Workshop Assessment & Planning • Understand Business Objectives & **Infrastructure Assessment Business Case** motivations for Cloud Adoption Digital Estate Discovery, Compatibility DB Upgrade, Cross DB migration, PaaS • Identify Current State & Pain Analysis, Infra Rationalization readiness & remediation planning Points **Cloud Adoption Framework** • **App Modernization Assessment Cost Planning** walkthrough & assessment Source Code Analysis. Containerization, PaaS Cost Forecasting, TCO/ROI analysis • White Boarding: Define a new or readiness & remediation planning finetune existing Strategy Identify priority Initiatives & next • **DB Modernization Assessment Migration Plan** steps DB Upgrade, Cross DB migration, PaaS Readiness, Remediation, Migration readiness & remediation planning Approach, Migration Wave Planning

Landing Zone

Design & Enablement of a Cloud Landing Zone

Resource Organization	Identity & Access Control	Networking	Security & Compliance	Monitoring & Cost Management
Define Management Groups Containers to Manage Access, Policy & Compliance	IAM Integrate existing AD with Cloud Centralized Identity Management	Network Design Architect & Design the overall network topology: Single Subs / Hub & Spoke / vWAN	Azure Blueprints Design Azure Blueprints for rapid deployment of environments	 Azure Monitor Monitor & Visualize Metrics for: Applications, VMs, Containers & Networks Query & Analyse Logs Setup Alerts Azure Cost Management Analyse Cloud Spend Define Budget & set up Alerts
Subscription Strategy Prod Non-Prod Sandbox Shared Services	MFA Enable MFA to add an additional layer of security RBAC Strategy Define roles & access to each roles: Owner, Contributor, Custom Roles (resource specific), Reader	Network Connectivity Identify the right strategy: S2S VPN or Express Route Perimeter Network Security Architect & Design considering perimeter security objectives: • Firewall • Third party NVA • Application Gateway / WAF • NSG Configurations • DDoS for internet facing resources	Azure Policy Enable Azure Policy as per best practices to ensure compliance	
Naming & Tagging Strategy Traceability & visibility for			 Security Center Enable Free tier to collect & analyse security data, and provide security recommendations Enable Standard tier for Threat Detection & Alerts 	
accurate Chargeback/Showback Resource Group Structure Resource groups and re-align existing resources Management groups				 Azure Advisor Enable Azure Advisor for: Security Recommendation Cost Optimization Operational recommendation for Policies, Logging etc Recommendations for HA
Subscriptions Resource groups Resources

Migrate

Migration Methodology

Readiness	Remediate	Migrate	Test & Optimize	Productionize
 OS & DB Readiness Validate readiness of Operating System & DB to 	OS Upgrade Upgrade the OS for identified workloads	Migration Tool Configure the Migration tool to enable replication	Test Test Availability, Performance, and remediate if needed	Go-Live Once tested & Validate, make cloud the primary DC
 migrate Create Remediation plan Application Readiness Validate readiness of the Application based on dependency / publisher support etc. Create Remediation plan 	DB Server Upgrade Upgrade the DB where applicable for identified workloads	Replicate Data Replication to Cloud	Optimize Optimize Infra based on Cost & Performance	
	App Server Remediation Remediate at Application level as applicable			

Thank You
