

ICT Cloud Adoption Framework - Govern

Mitigate organizational risk and accelerate adoption

Businesses struggle to ensure they are getting the results they were promised from a cloud migration.

Taking into account where you are, where you're going, and all of the stakeholders needed to get there. Governance ensures your technology is not only working for you, but your users, systems and budgets can't not comply with the designs you set.

The ICT Cloud Adoption Framework – Govern ensures that governance is a strength for your organization, not a weakness.

- A partnership where a customer can specify their desired business outcomes, and be content in the knowledge that they will be guided through the process in a way that mitigates these issues, that also provides ongoing support and guidance.
- A team that grows with you and your changing needs.

Deployment Acceleration

- Standardization and templating to ensure users can build compliant and secure Azure use without compromising governance.
- Design assistance and architectural support, both high and low level.

Begin with the end in mind.

Cost

- Ongoing Cost Optimization
- Resource Usage Monitoring
- Cost management at Policy Level
- Quarterly report on enhancement recommendations.

Build out your solutions the right way.

Governance

- ICT takes ownership and responsibility for governance policies.
- Identity & security baselines to monitor your organisational risk

Peace of Mind through Top of the Line Security

“Their professional attitude, skilled technical staff and excellent support make our relationship a very fruitful one and will not hesitate to recommend them.”- Bryan Saliba, IS Manager, Alf Mizzi & Sons

It's difficult to ensure you are making the most of your Microsoft subscriptions, and even harder to ensure you're doing it right.

The ICT Managed Productivity Suite solves this by offering all the of the Microsoft 365 portfolio, enabled on an ongoing basis, to ensure your organization is always up to date with what you need.

By engaging with our team, ensure that your business has all the information it needs to build out from scratch, and identify design issues long before go live. Rely on a trusted partner to grow your services without the pain of starting from scratch.

Don't go through the headache of discovering how to support your cloud journey. Leave changes and support in the hands of certified experts and free up your hands to focus on business strategy.

Build with security and compliance in mind – ensure that your permissions, governance and security design isn't going to leave holes in your defenses, while also keeping the impact light on your wallet.
