

# Data Governance with Azure Purview by IBM Consulting

Reimagine data governance to improve analytics outcomes

Data-driven transformation is at the top of every C-Suite's agenda. The ability to unleash that power and understanding of ever-growing data is a strategic success factor for every enterprise. As organizations strive towards unlocking this value from their data, they are facing critical challenges.

## Challenges to becoming data masters

 **There have never been more consumers of data**

Organizations enabling departmental/LOB decision-makers to access data marketplaces will increase from 21% to 27% in 2 Years – 451 Research by S&P Global Market Intelligence

 **There is an increasing need to understand and protect the data**

Changing regulations on privacy are making it indispensable to establish visibility into the location and movement of sensitive data

## Unifying people, process and technology to accelerate insights

As organizations continue to deal with even more complex data environments than before, while addressing increasing user demands at the same time, a structured approach to data governance becomes critical.

Through this offering, IBM Consulting provides a framework and implementation solution for all three aspects (People, Process and Technology) of the Data Governance journey to help your organization better discover, understand and trust the data with Azure Purview as key technology component.

## Our delivery process

### Vision and Discovery Workshop

- **Brief:** Provide an overview of IBM Enterprise Data Governance Framework and Azure Purview.
- **Discover:** Understand the data ecosystem and identify key business challenges and opportunities.

**Final Deliverable:** Governance blue print and current ecosystem assessment report

### Minimum Value Product (MVP)

- **Identify:** Define key data governance use cases for value realization
- **Define:** Plan an implementation roadmap and define roles and responsibilities
- **Implement:** Architect and build the MVP using our assets and best practices covering people, process and technology.

**Final Deliverable:** Custom implementation of Data Governance MVP to satisfy defined use cases

### Co-execute

- Extend and utilize the framework, adopt the change management and realize business transformation use cases.

**Final Deliverable:** Roadmap for further extension of the IBM Consulting Data Governance Framework

**Duration: 8-12 Weeks**

**Cost: \$250,000**

## IBM Consulting helps clients tailor their secure hybrid multicloud journey to Azure
