# HBS

Power BI Jumpstart

What is Power BI?

Power BI is a way to explore data and visualize it. It plays a role in data quality, data manipulation and transformation, and provides a platform for data governance.

What is a Power BI Jumpstart?

HBS can help with the build and automation of the customers reporting environment using Power BI as their analytics and dashboarding tool from one to many sources, both in the cloud and on premises. HBS will assist in prioritizing current reporting needs and create a project plan that will manage both HBS and the Customers expectations on progression. Typically, there are multiple phases within a data project. This first Phase of the development will establish a baseline for future development or phases in the Customer's overall data journey.

Goal of the Project

- Display the abilities of Power BI

- Drive adoption of the analytics tool within your organization

- Establish a baseline of data sets, data models, and reports

- Establish a security model for how the data will be accessed and consumed

- Create a design template for consistency and report branding

- Create a resource plan that will identify each role within the virtual team between HBS and the customer
