

Slalom ESG Data Workshop

Our ESG Data Workshop helps clients determine where to prioritize and focus efforts on ESG data related solutions.

Data is critical to ESG initiatives, and this workshop followed by Discovery and Implementation of solutions leveraging Azure Cloud and/or MS Cloud for Sustainability can help you make significant progress on your ESG Journey.

FOCUS AREAS

We will work with you to identify ESG Data needs related to the following uses:

Corporate ESG Reporting

To enable annual ESG reporting, voluntary disclosures (ex. GRI, SASB, TCFD), regulatory reporting (ex. SEC, CSRD) and any other external information sharing.

Operational Decision Making

To enable evaluation of suppliers, to identify opportunities to reduce energy consumption, to identify opportunities to optimize transportation, to evaluate opportunities to leverage renewable energy.

Management and Tracking of Actions

To track the impact of ESG actions being taken across all operational areas of the business.

Forecasting and Scenario Modeling

To forecast expected impact on your footprint of actions taken, planned or being considered.

GETTING STARTED

Through Slalom's ESG Data Workshop we will:

- Align on your organization's vision for ESG data
- Identify the key internal and external stakeholders and personas who need to rely on ESG data and metrics
- Identify the most readily available data sources
- Define the key priorities for ESG data solution automation
- Determine the scope for a pilot implementation
